شركة التكافل للتأمين
TAKAFUL INSURANCE Co.

The Takaful Platform

An integrated takaful system for Takaful Insurance Company

Preview · November 2026

التَّأمِينُ بِرُؤيَةٍ شَرعِيَّة

Fourteen modules, one platform

The twelve modules in your proposal, plus HR and payroll.

Customer management

Policy issue & renewal

Underwriting & risk

Claims

Retakaful

Contributions & billing

Agents & brokers

Accounting & Finance

Dashboards & reports

Sharia Compliance

Surplus & Distribution

Investment Funds

Human Resources

Payroll

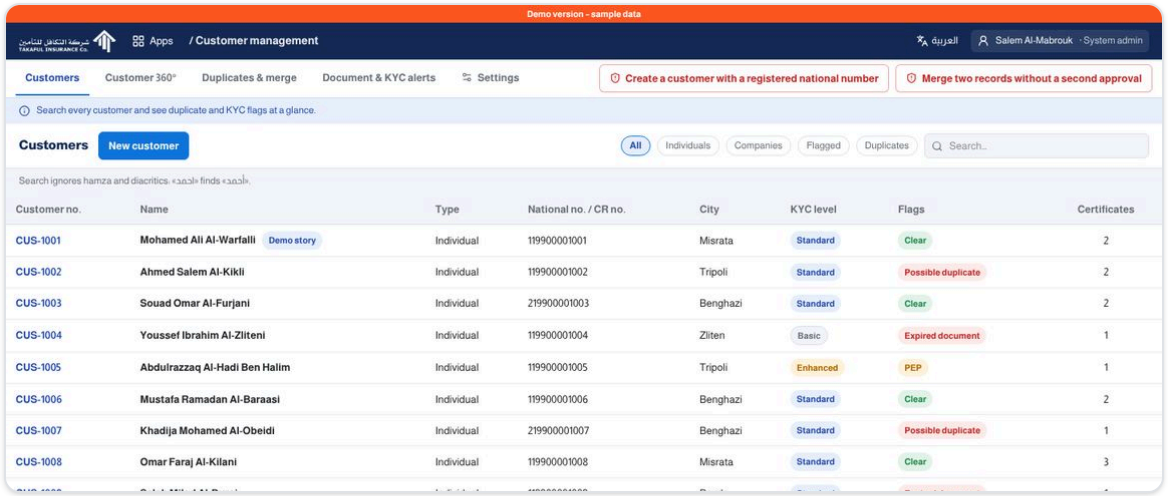

One participant's journey across every module

1. We register the customer and verify identity
2. We underwrite and price instantly
3. We issue a signed PDF with QR
4. We collect and split between the funds
5. We settle the claim in 6 stages
6. We recover the retakaful share
7. We distribute surplus to participants

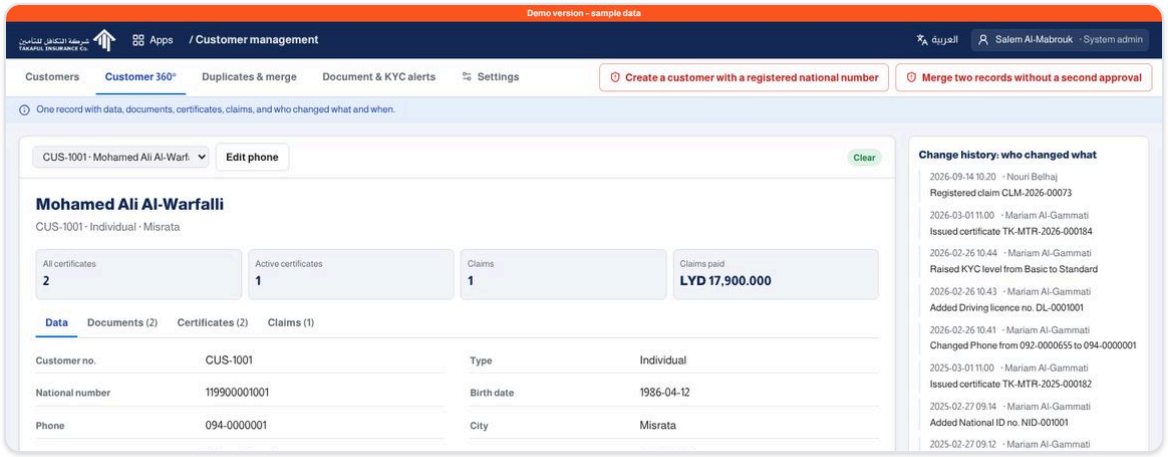

Customer management

One record per customer: documents, certificates, claims and every change

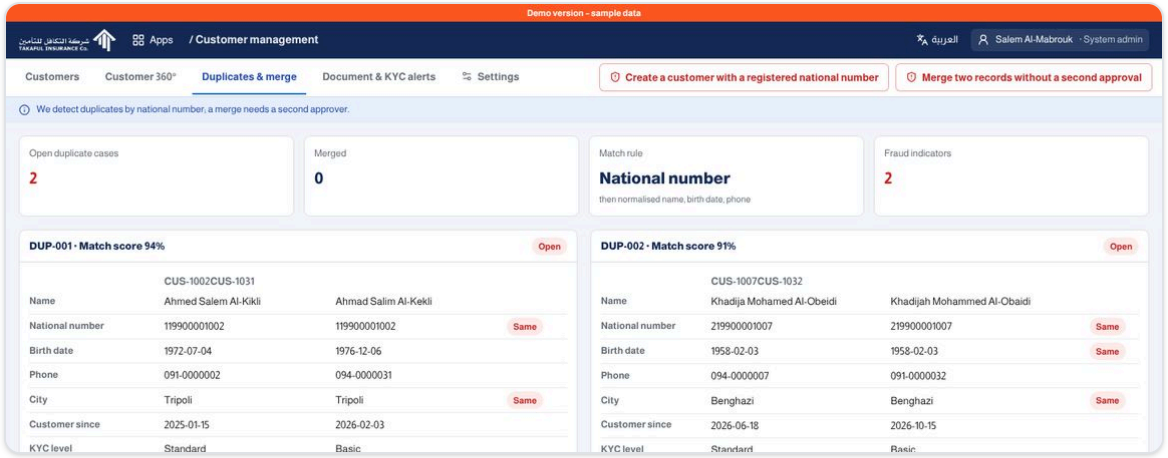

Proposal §3.1 | Sensitive module

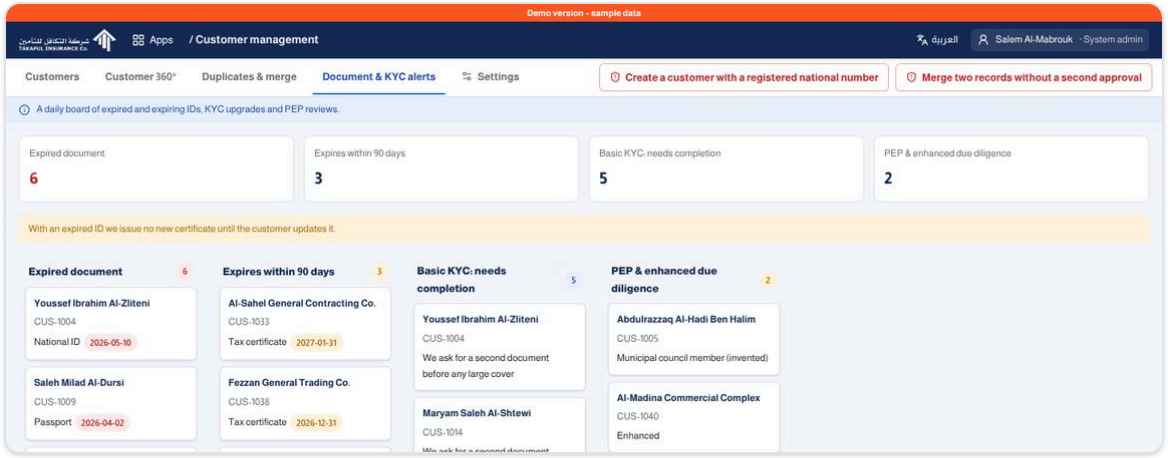

Customers: Search every customer and see duplicate and KYC flags at a glance.

Customer 360°: One record with data, documents, certificates, claims, and who changed what and when.

Duplicates & merge: We detect duplicates by national number; a merge needs a second approver.

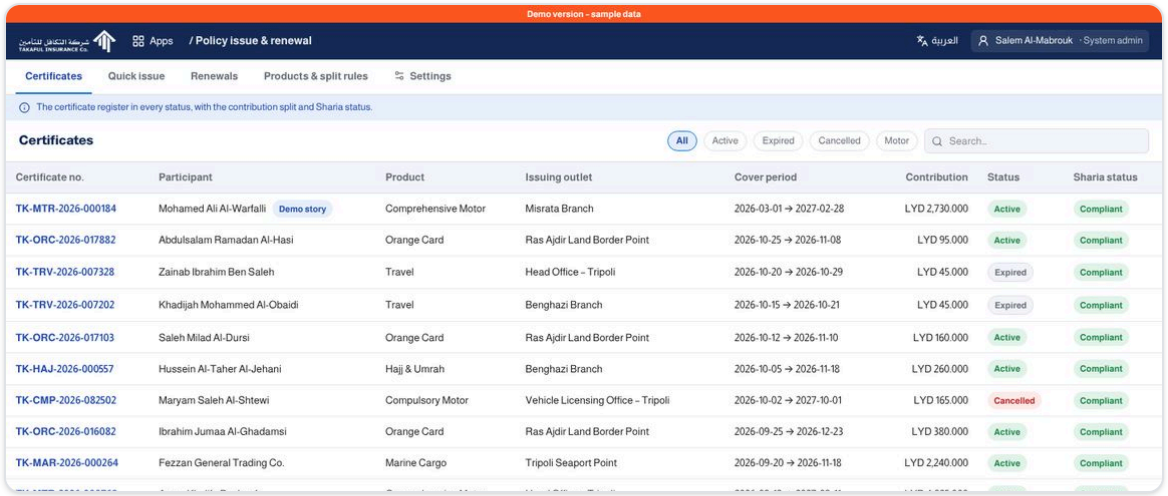

Document & KYC alerts: A daily board of expired and expiring IDs, KYC upgrades and PEP reviews.

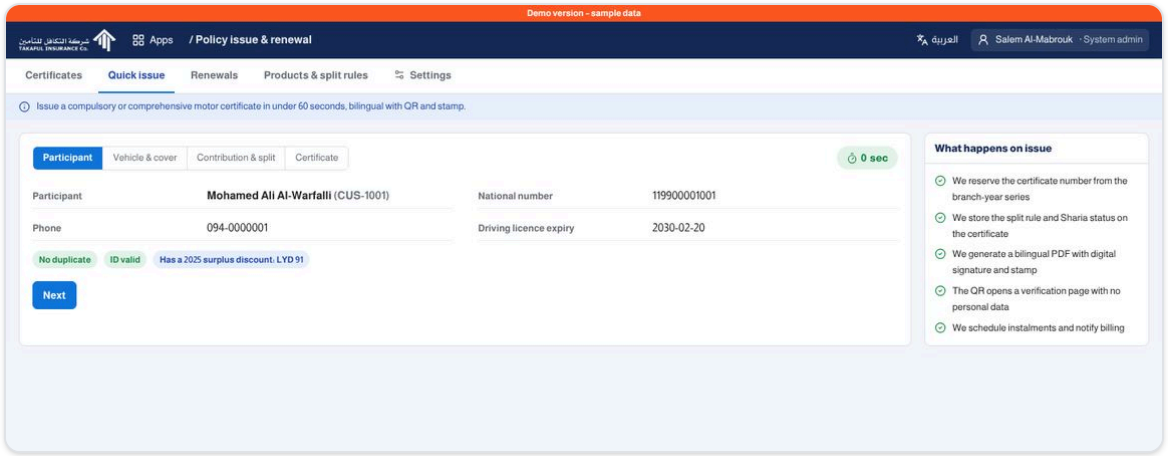

Policy issue & renewal

We issue a takaful certificate in a minute and remind customers 30 days before expiry

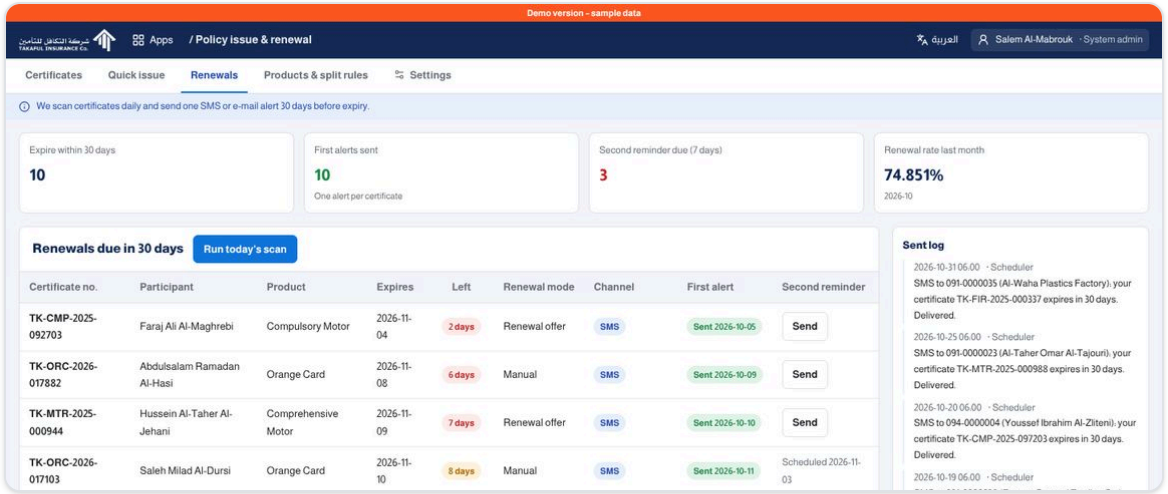

Proposal §3.2

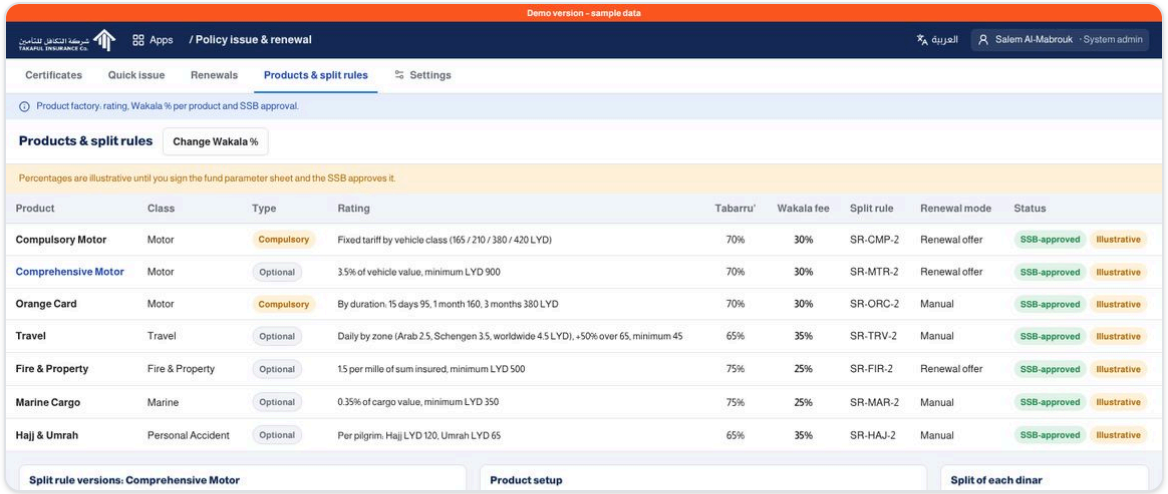

Certificates: The certificate register in every status, with the contribution split and Sharia status.

Quick issue: Issue a compulsory or comprehensive motor certificate in under 60 seconds, bilingual with QR and stamp.

Renewals: We scan certificates daily and send one SMS or e-mail alert 30 days before expiry.

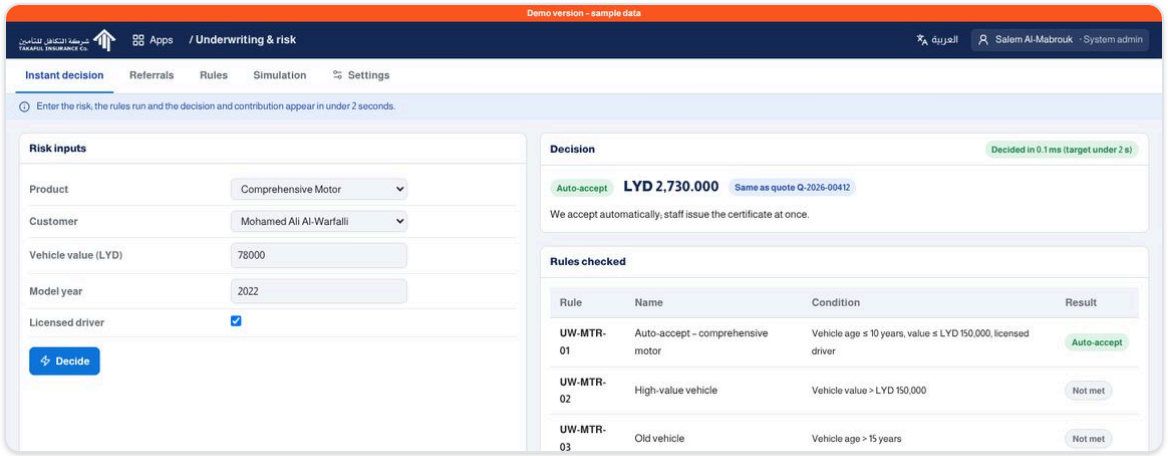

Products & split rules: Product factory: rating, Wakala % per product and SSB approval.

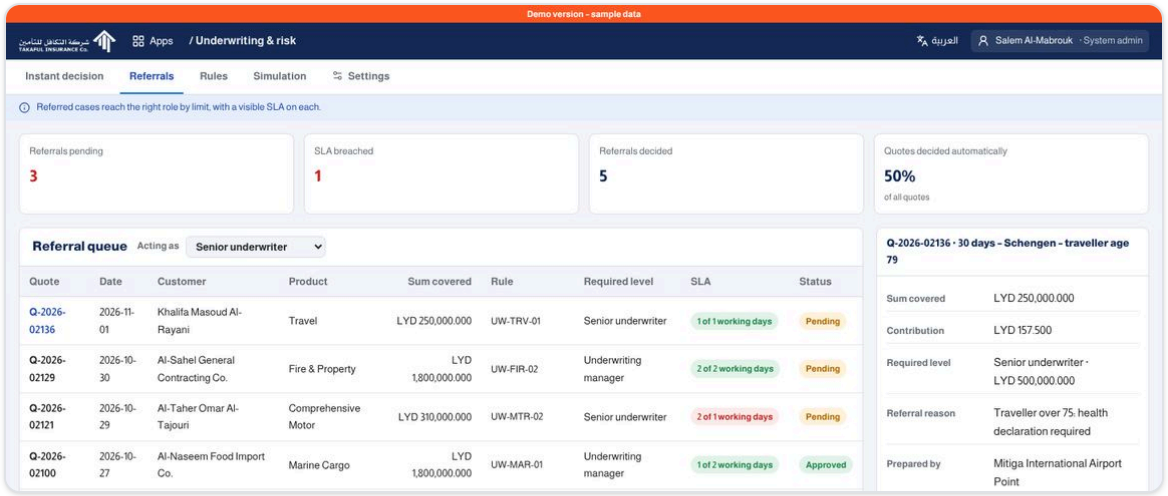

Underwriting & risk

Instant decisions for normal cases; complex ones go to the approval matrix

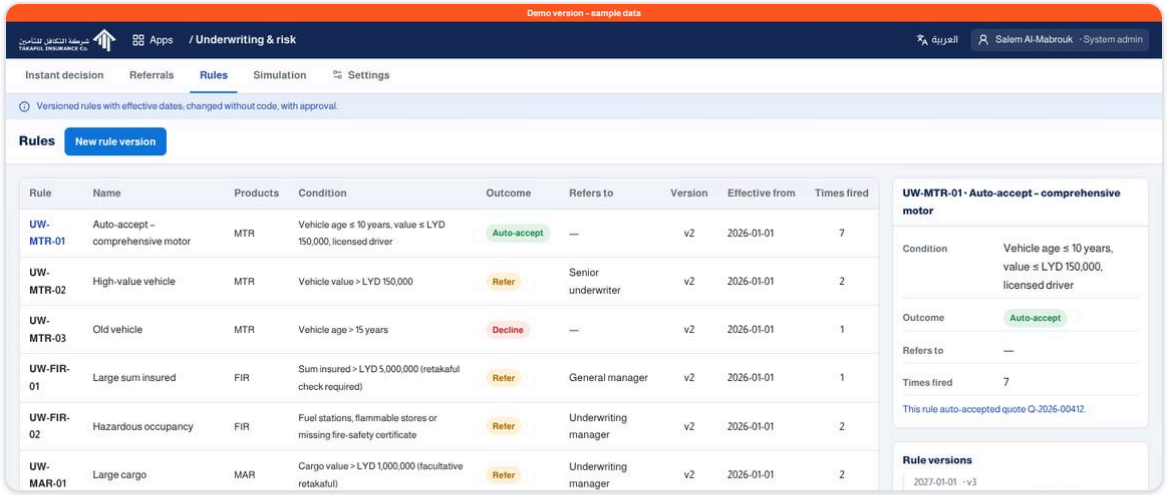

Proposal §3.3

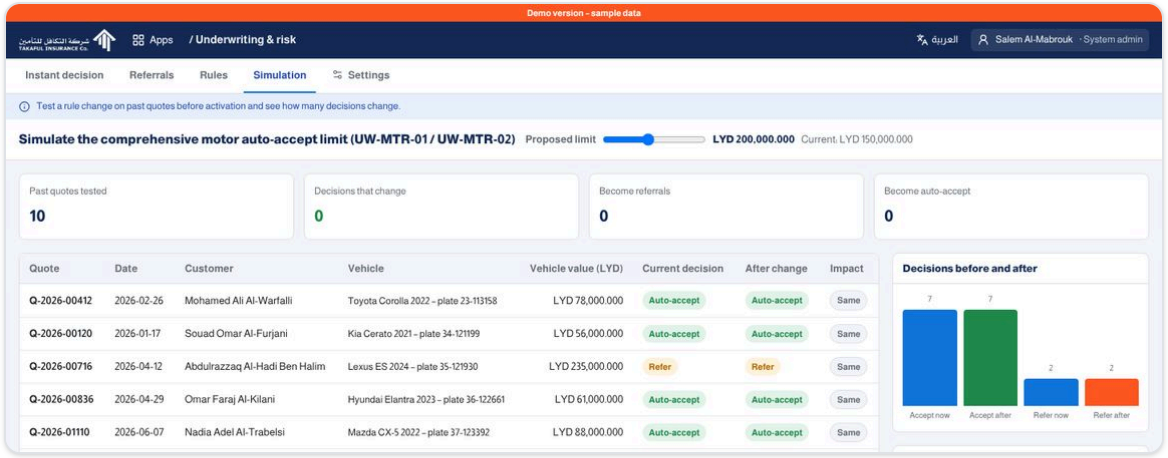

Instant decision: Enter the risk; the rules run and the decision and contribution appear in under 2 seconds.

Referrals: Referred cases reach the right role by limit, with a visible SLA on each.

Rules: Versioned rules with effective dates; changed without code, with approval.

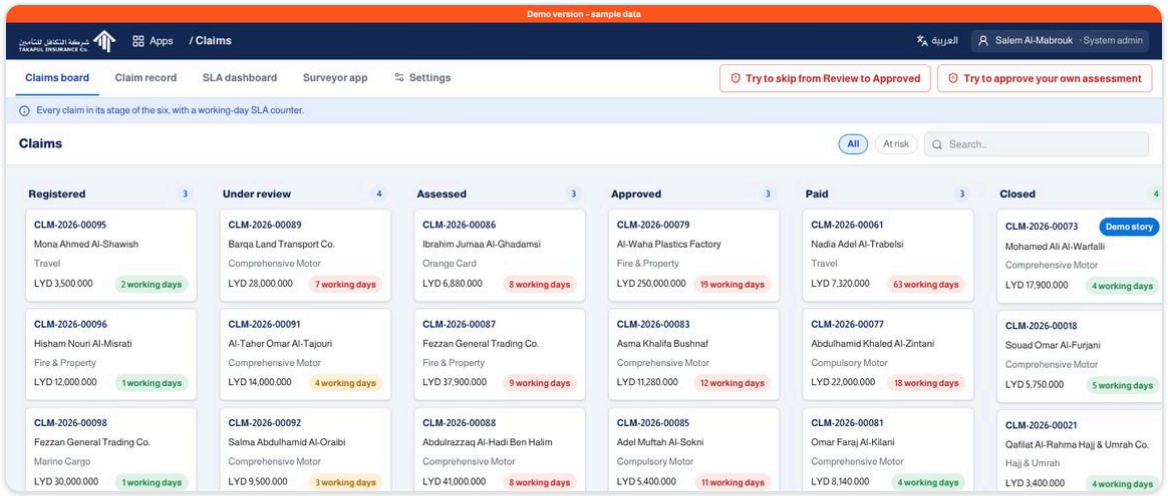

Simulation: Test a rule change on past quotes before activation and see how many decisions change.

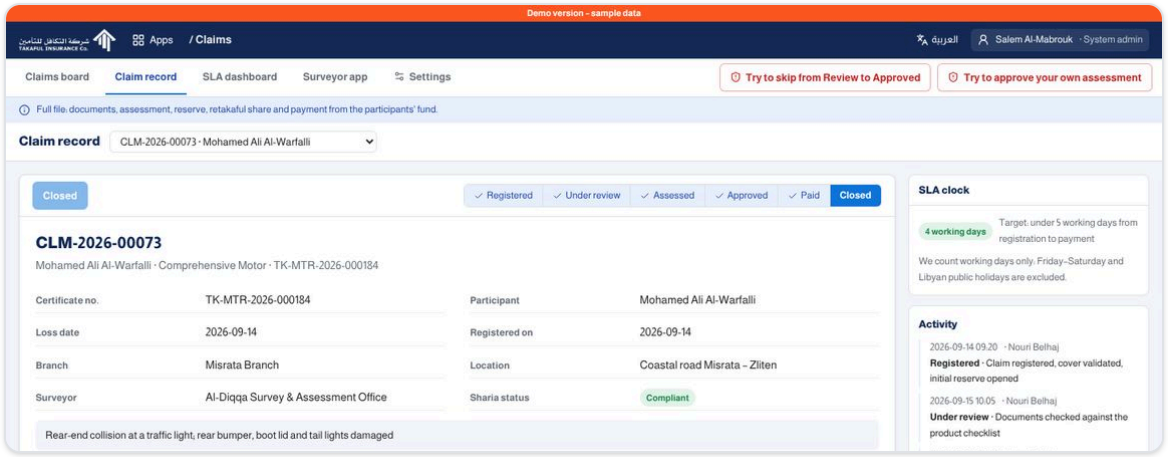

Claims

Six strict stages; paid in under 5 working days

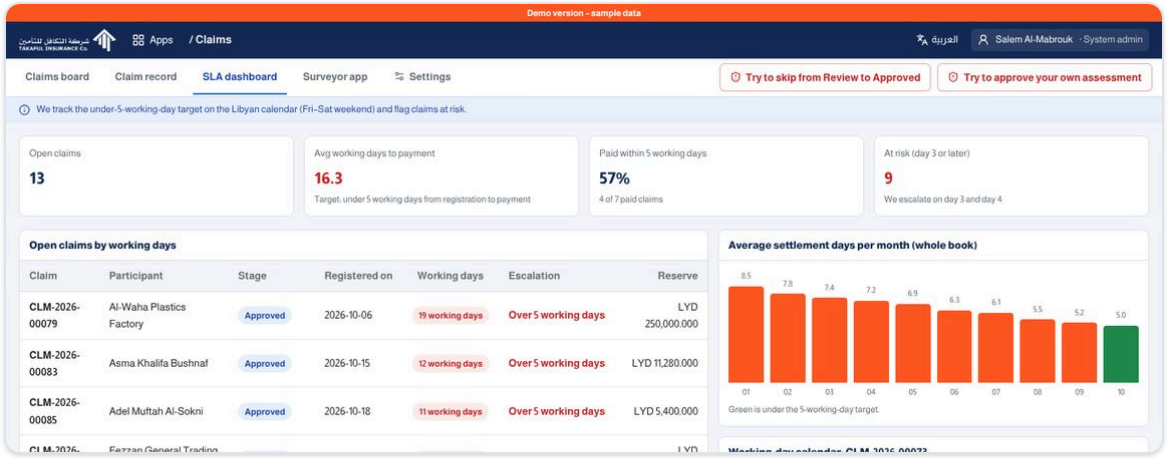

Proposal §3.4 · Sensitive module

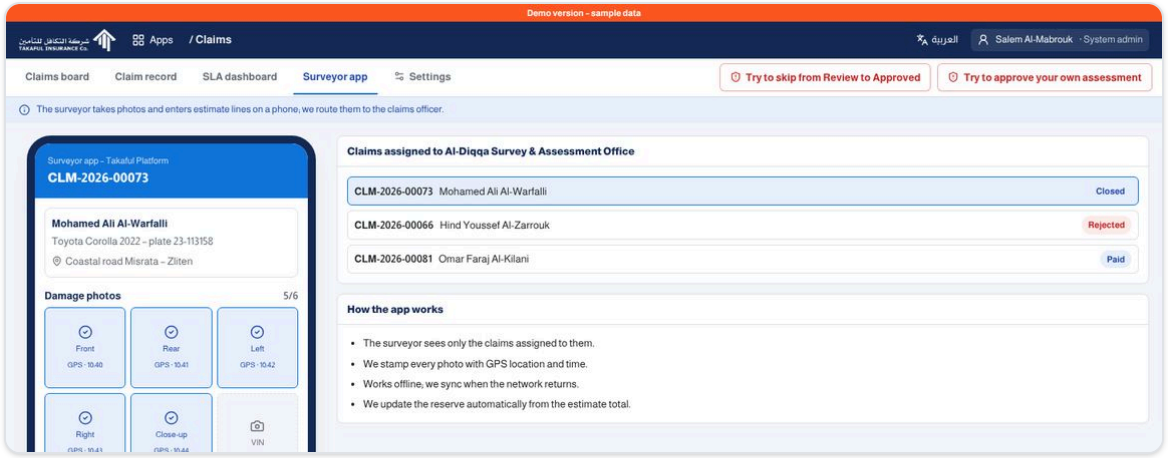

Claims board: Every claim in its stage of the six, with a working-day SLA counter.

Claim record: Full file: documents, assessment, reserve, retakaful share and payment from the participants' fund.

SLA dashboard: We track the under-5-working-day target on the Libyan calendar (Fri–Sat weekend) and flag claims at risk.

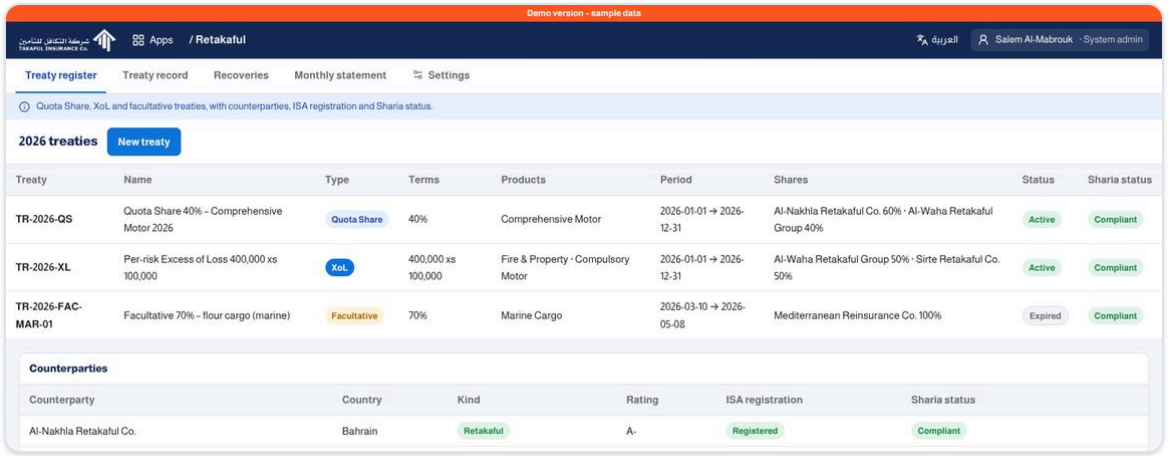

Surveyor app: The surveyor takes photos and enters estimate lines on a phone; we route them to the claims officer.

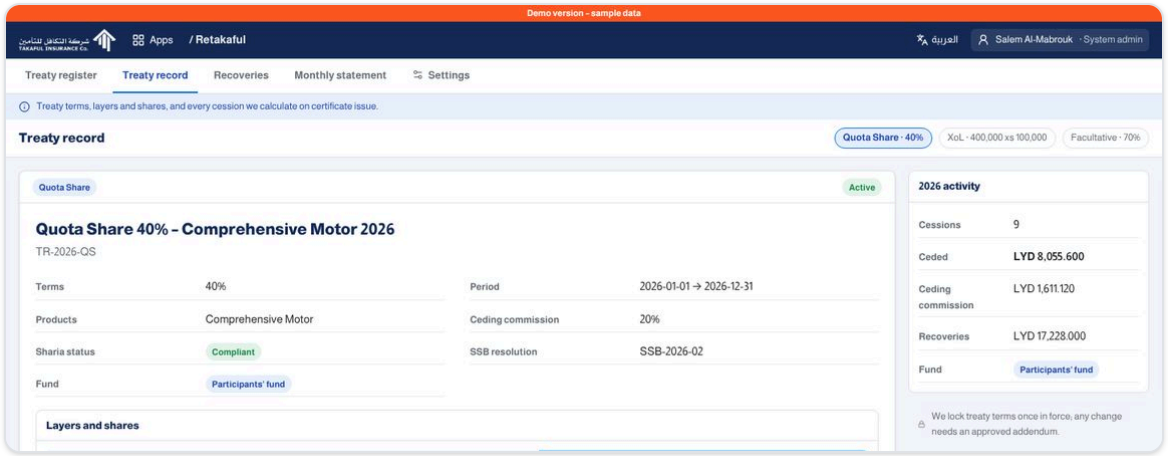

Retakaful

Treaties, automatic cessions and recoveries, monthly reconciliation

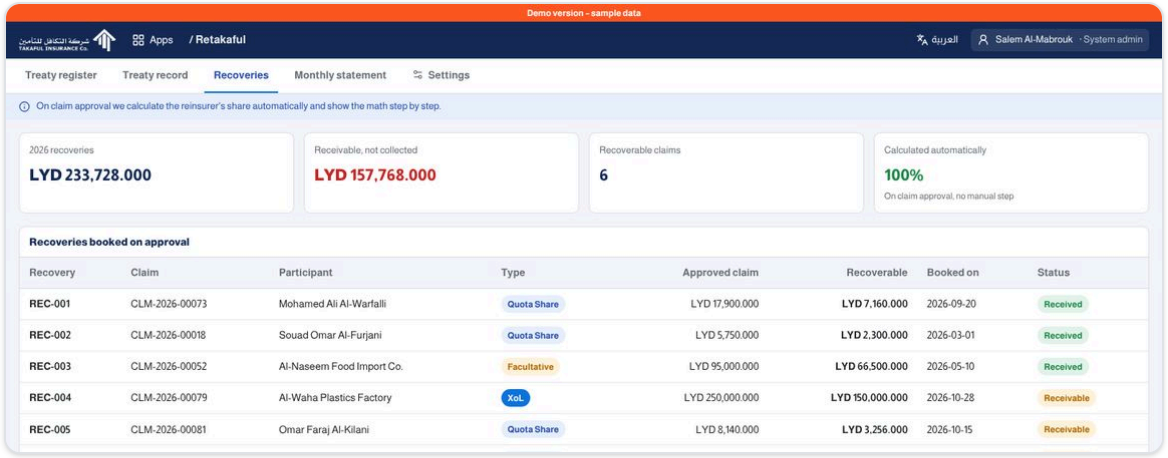

Proposal §3.5

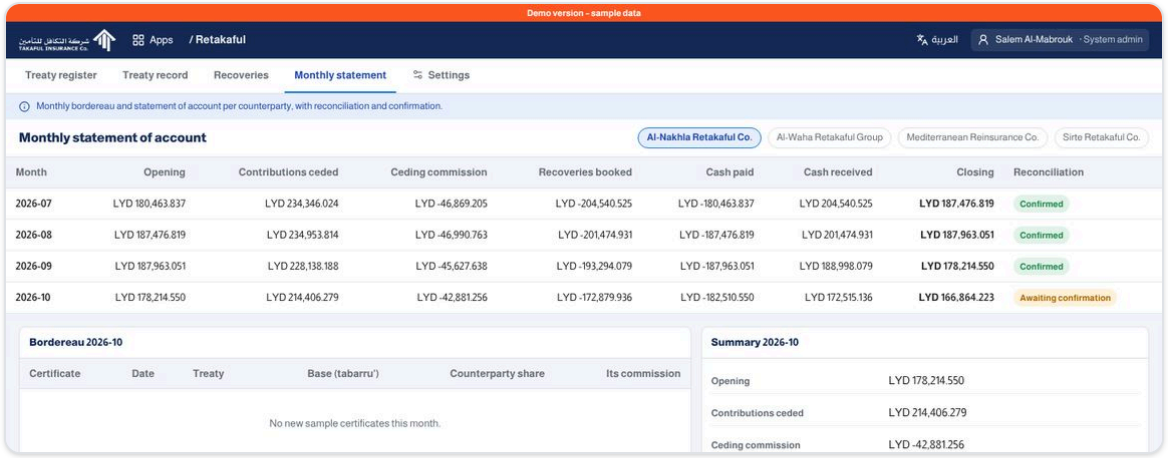

Treaty register: Quota Share, XoL and facultative treaties, with counterparties, ISA registration and Sharia status.

Treaty record: Treaty terms, layers and shares, and every cession we calculate on certificate issue.

Recoveries: On claim approval we calculate the reinsurer's share automatically and show the math step by step.

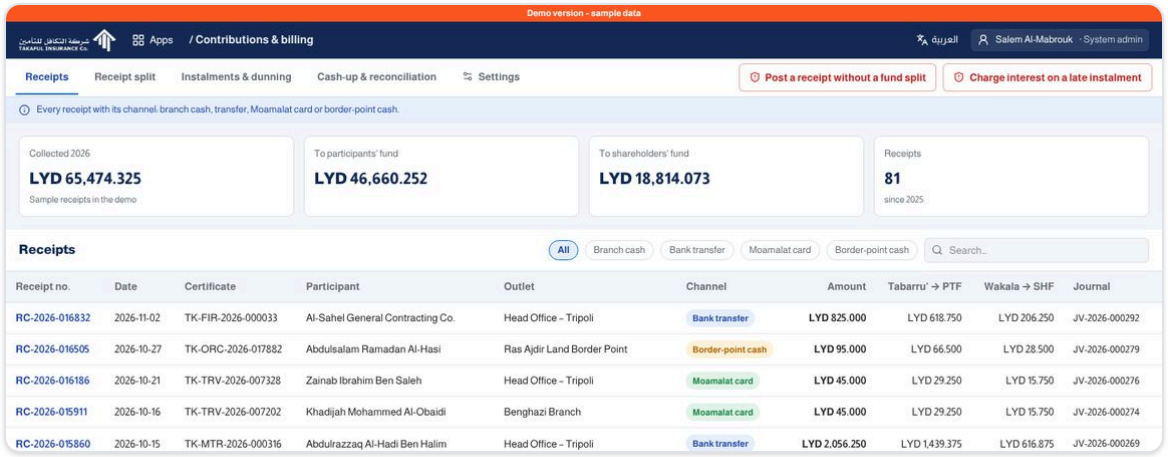

Monthly statement: Monthly bordereau and statement of account per counterparty, with reconciliation and confirmation.

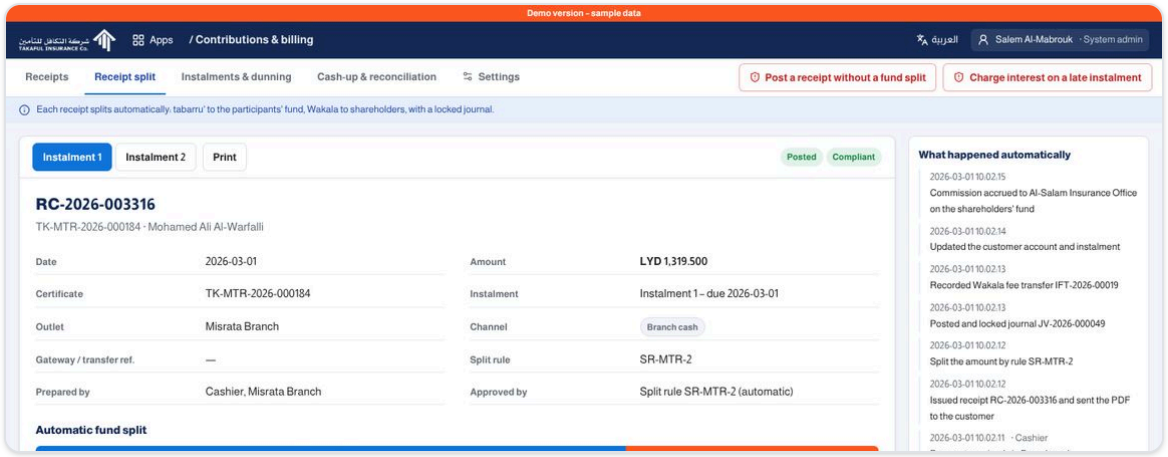

Contributions & billing

We collect contributions on every channel and split them between the funds automatically

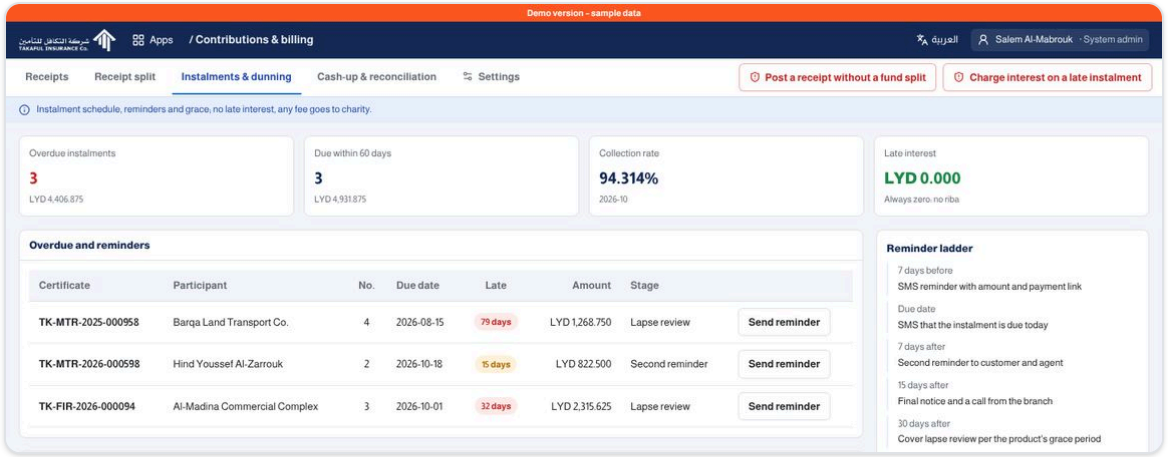

Proposal §3.6 | Sensitive module

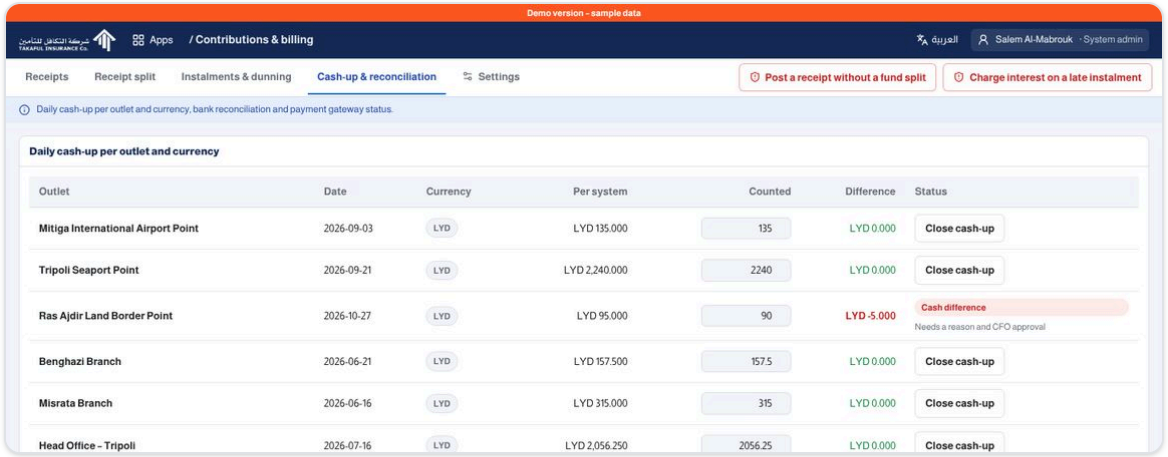

Receipts: Every receipt with its channel: branch cash, transfer, Moamalat card or border-point cash.

Receipt split: Each receipt splits automatically: tabarru' to the participants' fund, Wakala to shareholders, with a locked journal.

Instalments & dunning: Instalment schedule, reminders and grace; no late interest, any fee goes to charity.

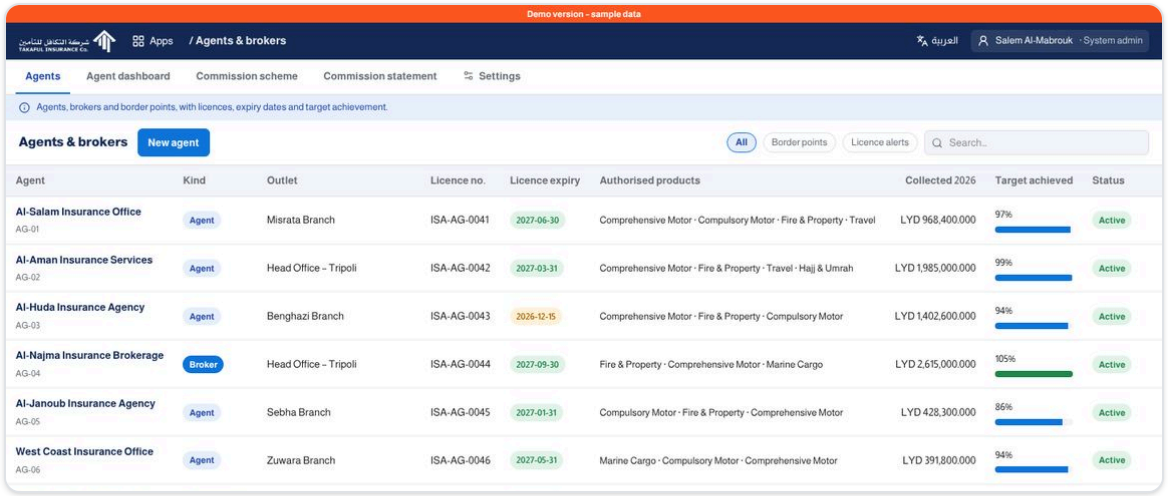

Cash-up & reconciliation: Daily cash-up per outlet and currency, bank reconciliation and payment gateway status.

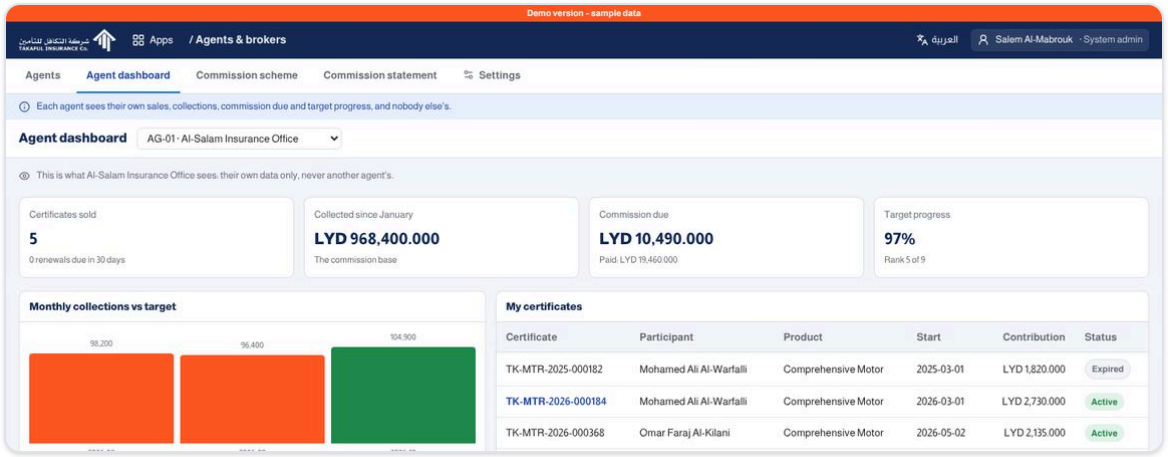

Agents & brokers

A dashboard per agent and tiered commission on collected business only

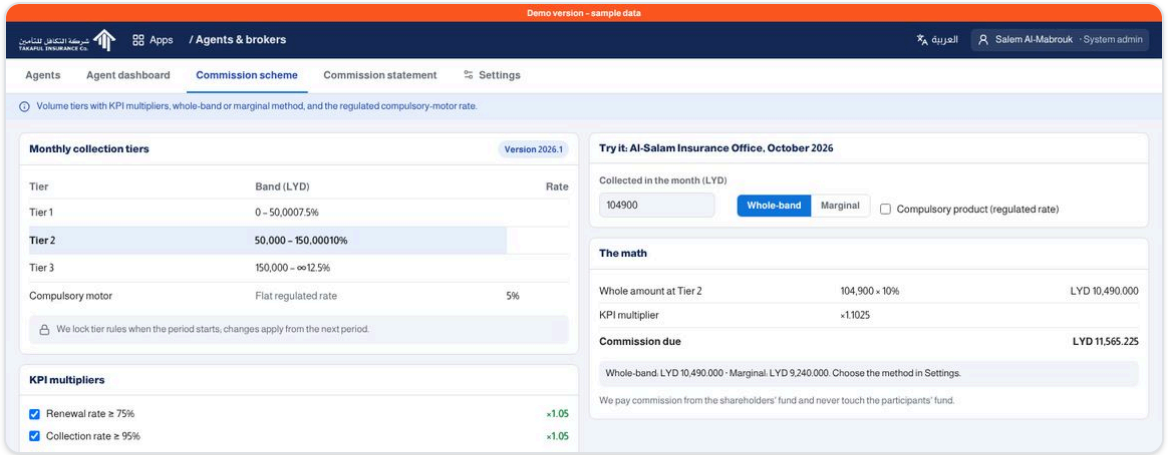

Proposal §3.7

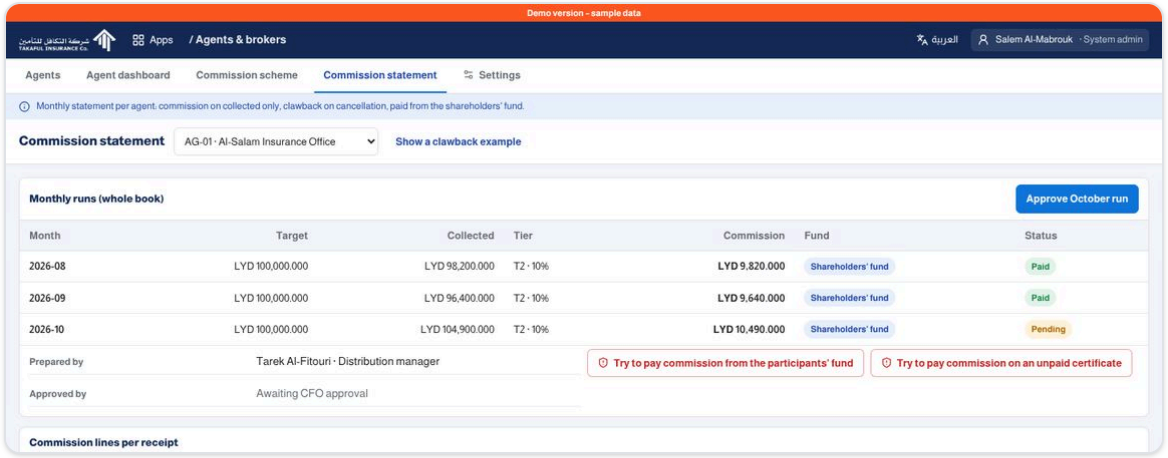

Agents: Agents, brokers and border points, with licences, expiry dates and target achievement.

Agent dashboard: Each agent sees their own sales, collections, commission due and target progress, and nobody else's.

Commission scheme: Volume tiers with KPI multipliers, whole-band or marginal method, and the regulated compulsory-motor rate.

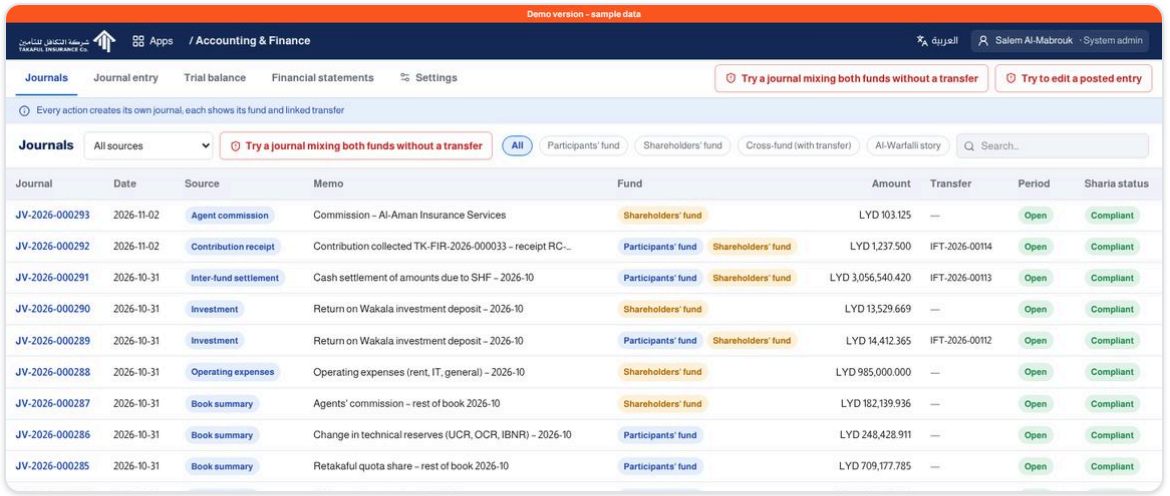

Commission statement: Monthly statement per agent: commission on collected only, clawback on cancellation, paid from the shareholders' fund.

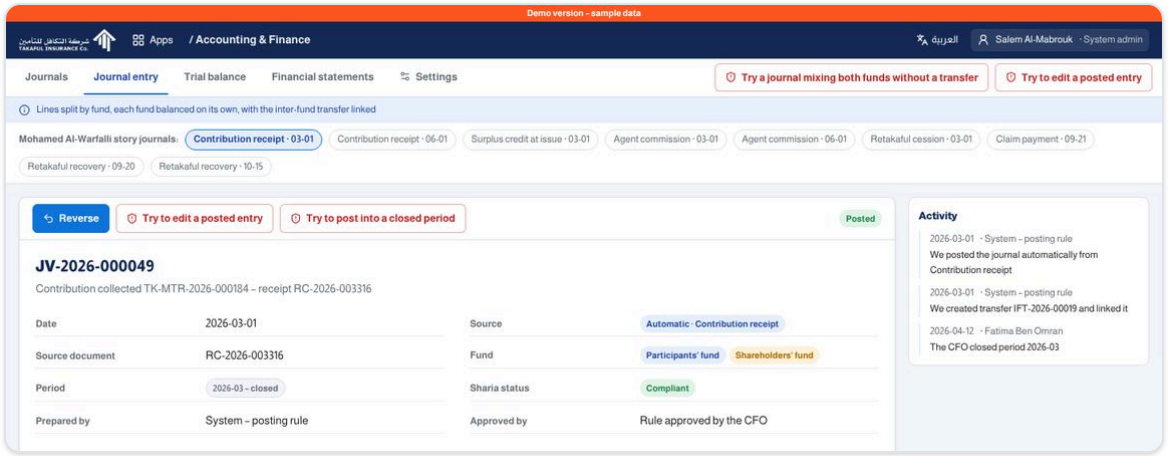

Accounting & Finance

Automatic journals for every action, each fund balanced on its own, statements in one click

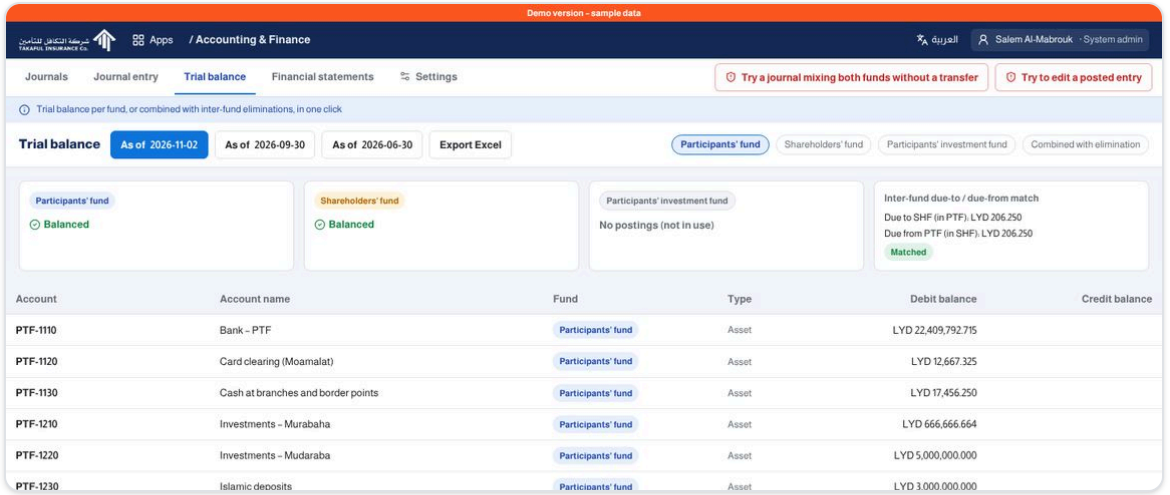

Proposal §3.8 | Sensitive module

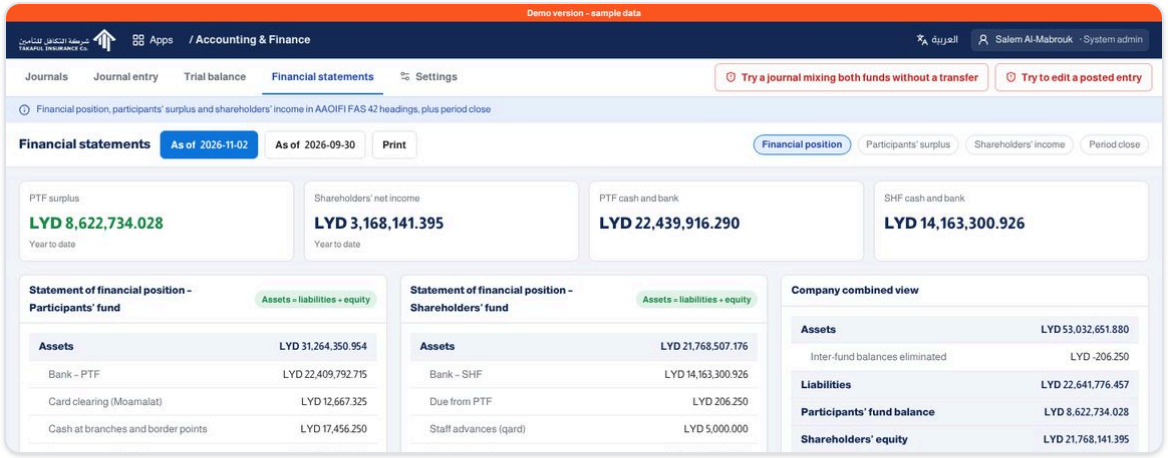

Journals: Every action creates its own journal, each shows its fund and linked transfer

Journal entry: Lines split by fund, each fund balanced on its own, with the inter-fund transfer linked

Trial balance: Trial balance per fund, or combined with inter-fund eliminations, in one click

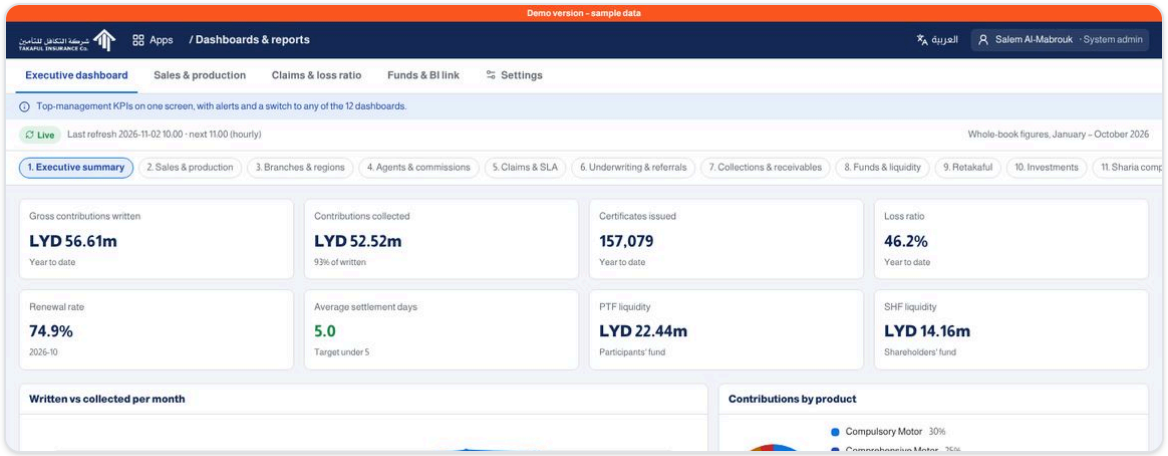

Financial statements: Financial position, participants' surplus and shareholders' income in AAOIFI FAS 42 headings, plus period close

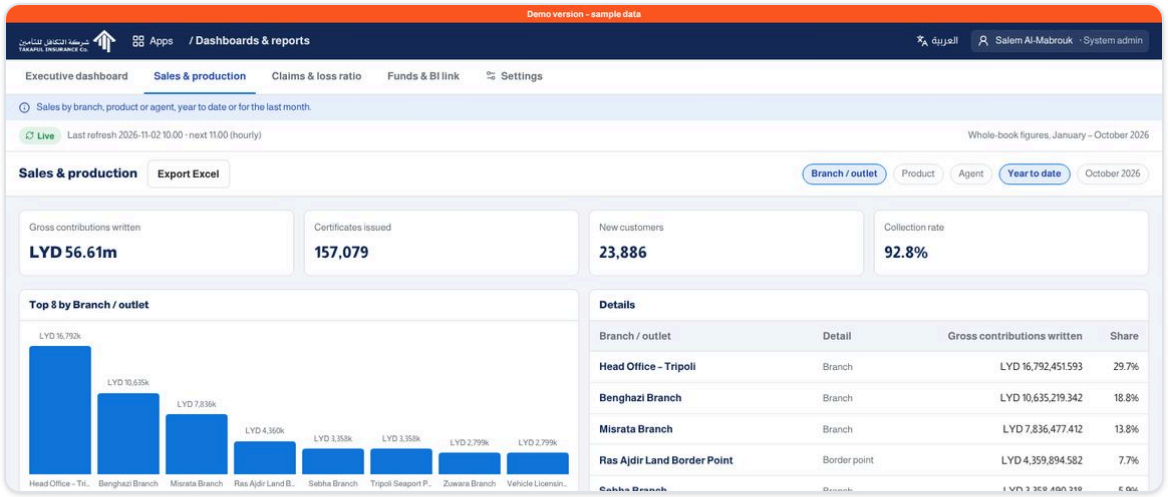

Dashboards & reports

24 KPIs and 12 interactive dashboards refreshed hourly, linked to Metabase or Power BI

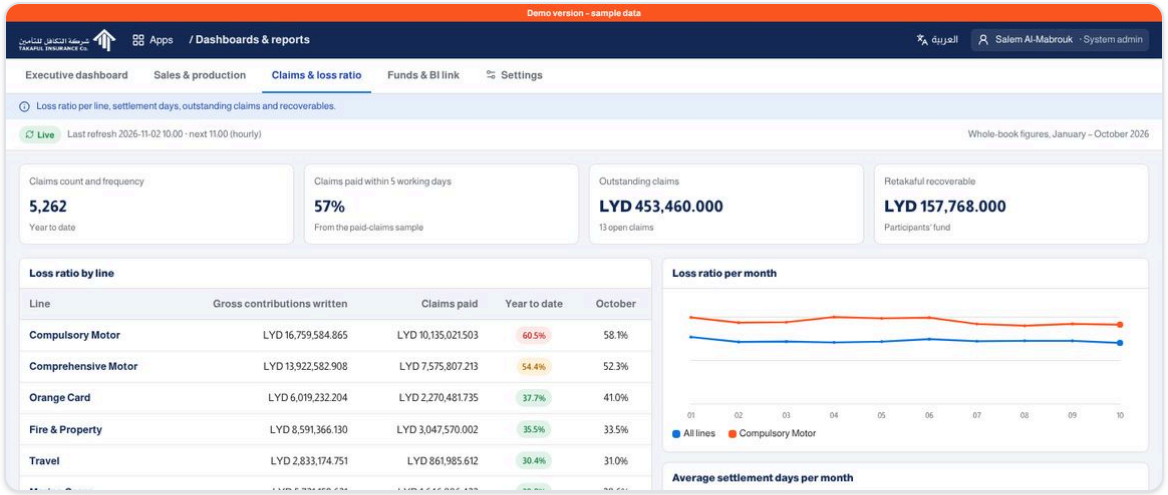

Proposal §3.9

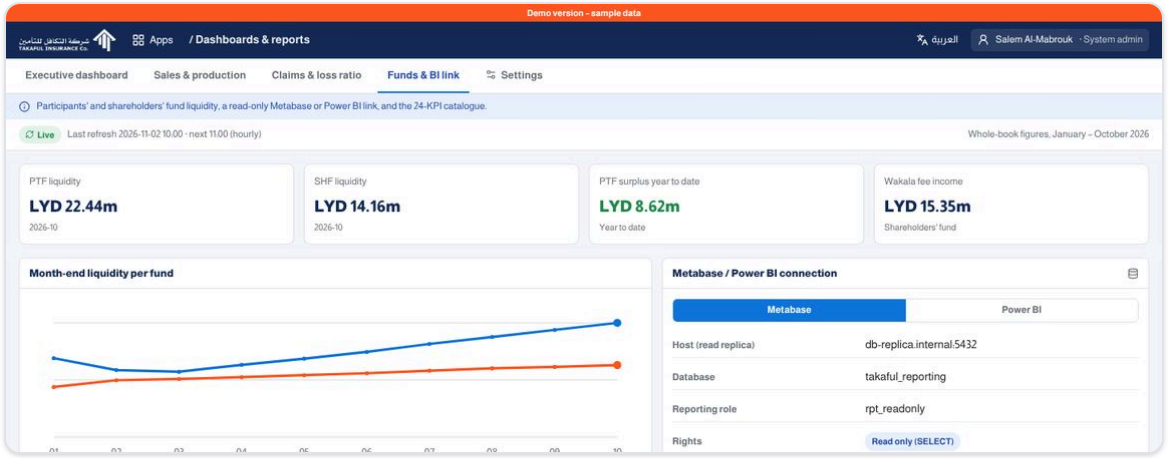

Executive dashboard: Top-management KPIs on one screen, with alerts and a switch to any of the 12 dashboards.

Sales & production: Sales by branch, product or agent, year to date or for the last month.

Claims & loss ratio: Loss ratio per line, settlement days, outstanding claims and recoverables.

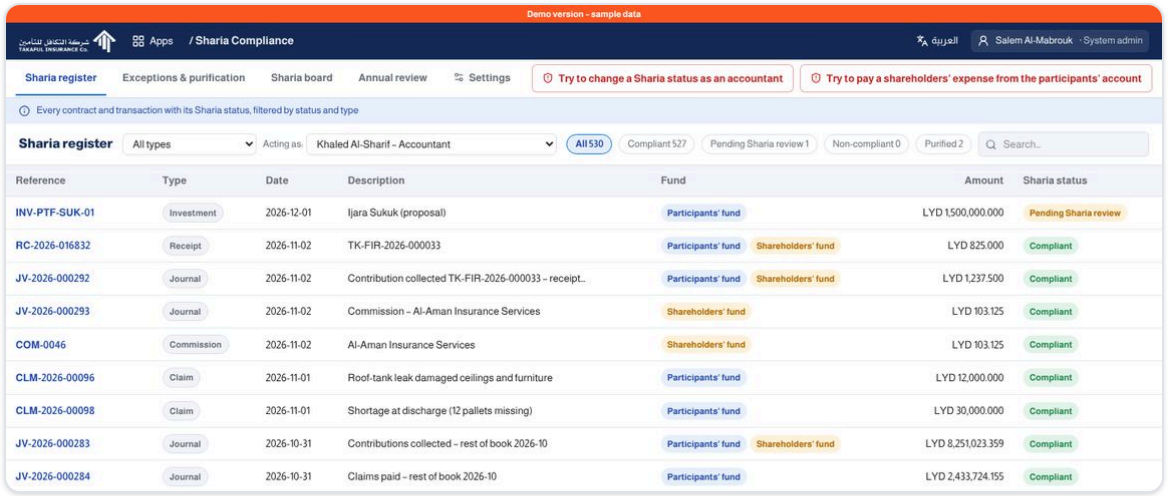

Funds & BI link: Participants' and shareholders' fund liquidity, a read-only Metabase or Power BI link, and the 24-KPI catalogue.

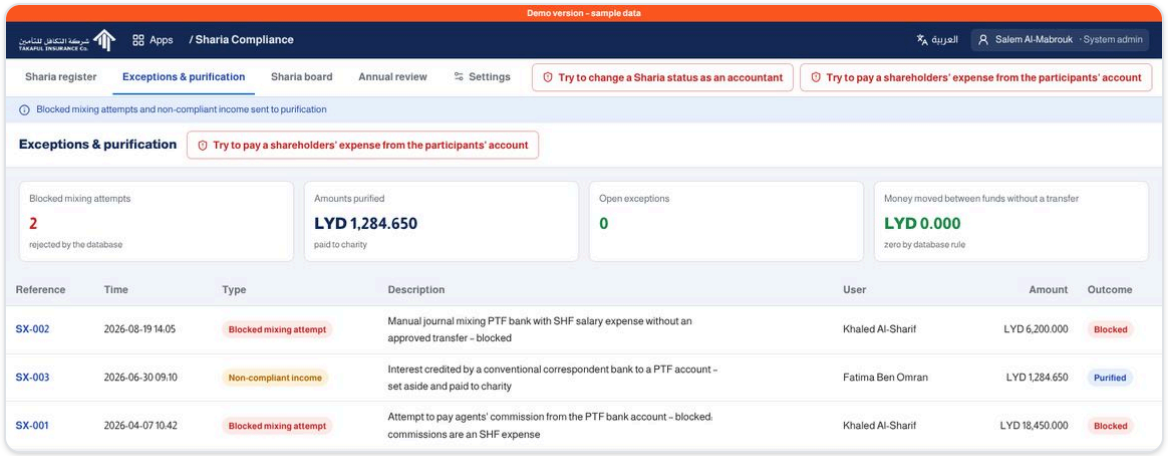

Sharia Compliance

Sharia status on every contract and transaction, exceptions log, SSB resolutions and the compliance certificate

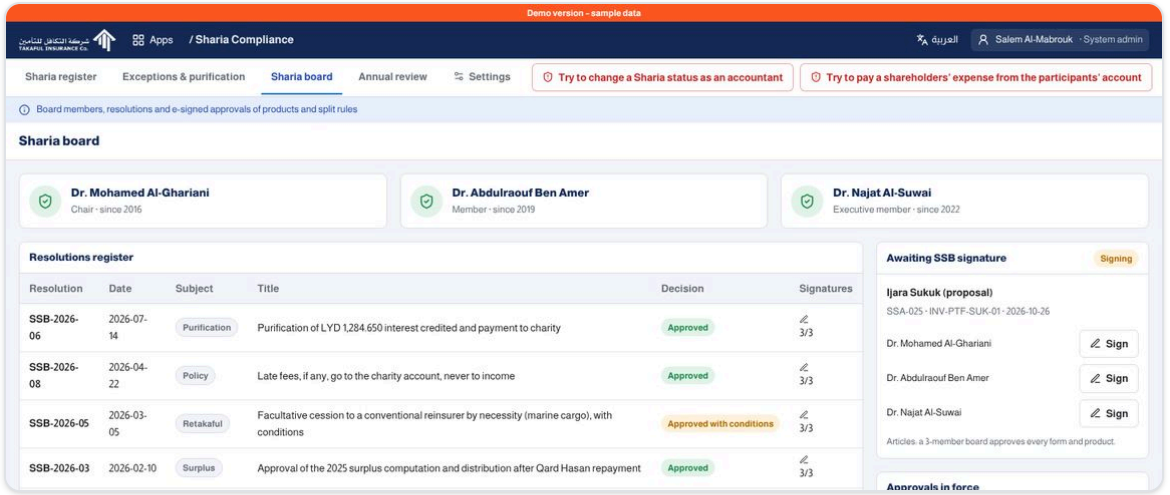

Proposal §3.10 | Sensitive module

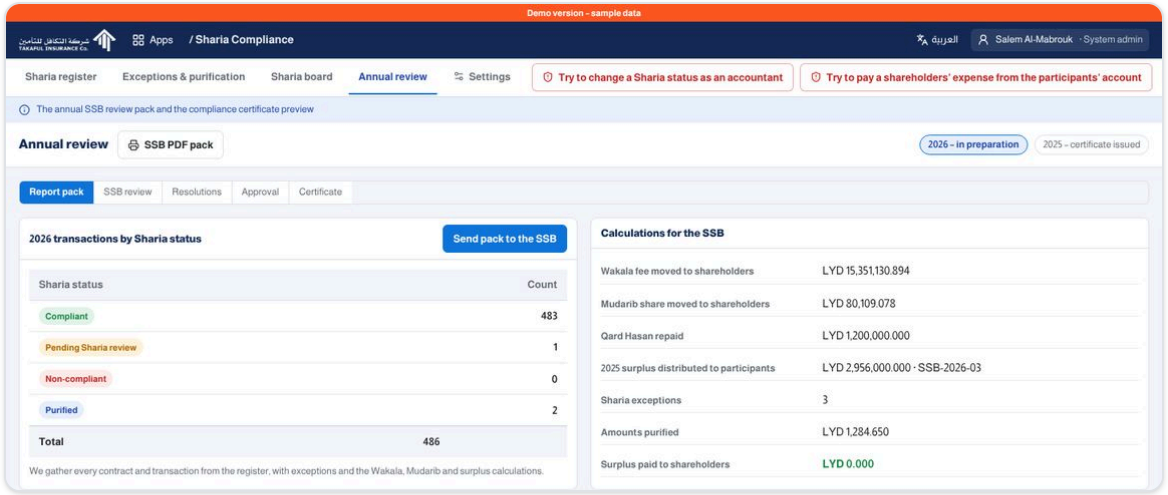

Sharia register: Every contract and transaction with its Sharia status, filtered by status and type

Exceptions & purification: Blocked mixing attempts and non-compliant income sent to purification

Sharia board: Board members, resolutions and e-signed approvals of products and split rules

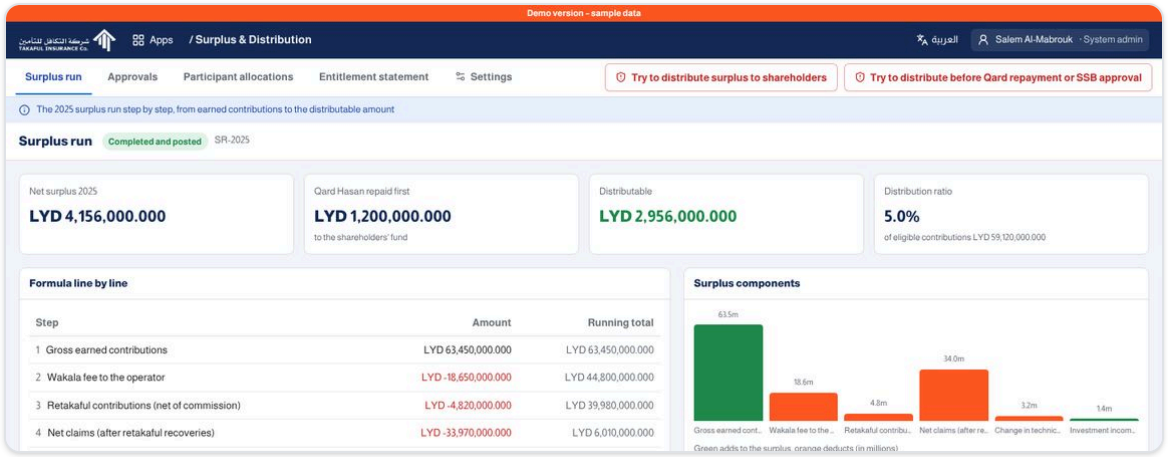

Annual review: The annual SSB review pack and the compliance certificate preview

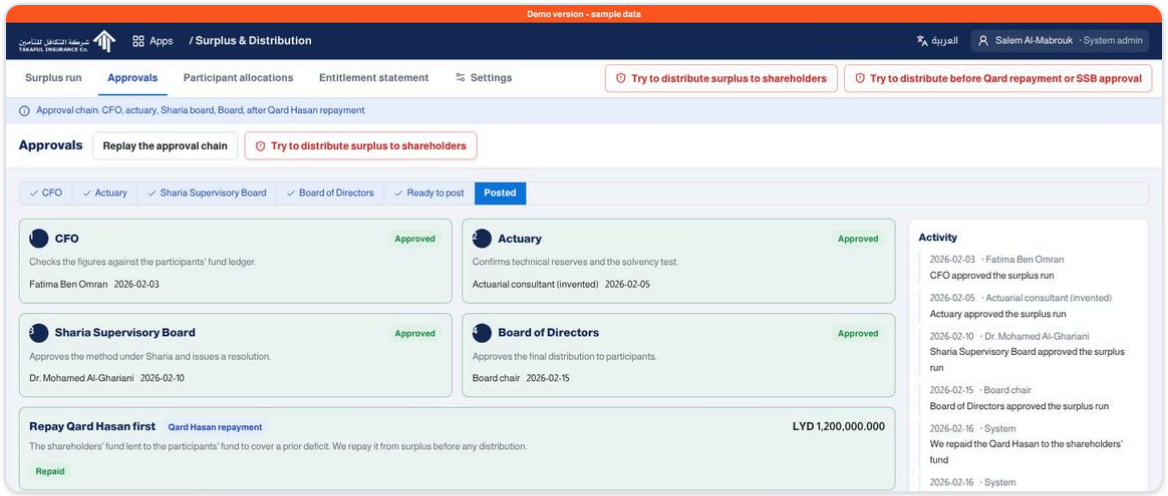

Surplus & Distribution

We compute the takaful surplus step by step and give 100% to participants pro rata

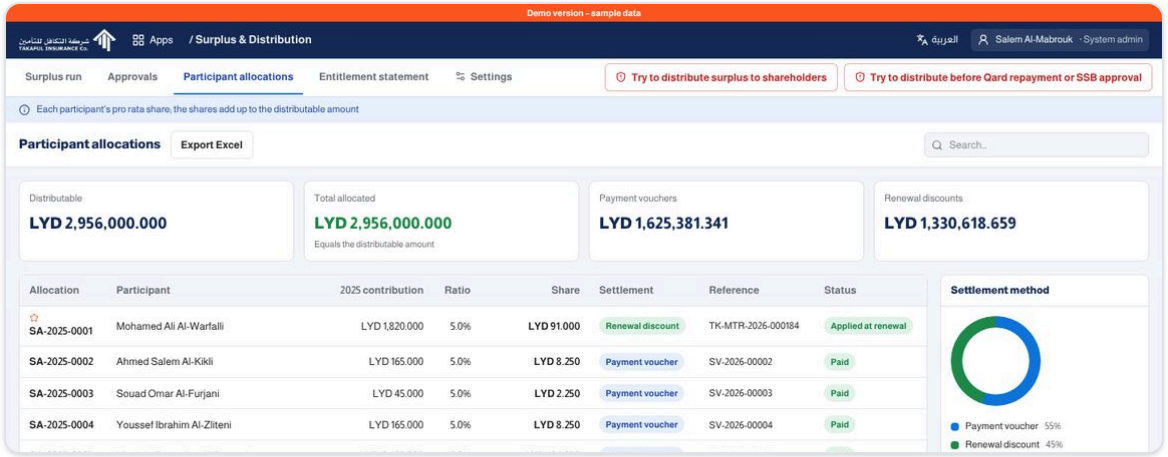

Proposal §3.11 | Sensitive module

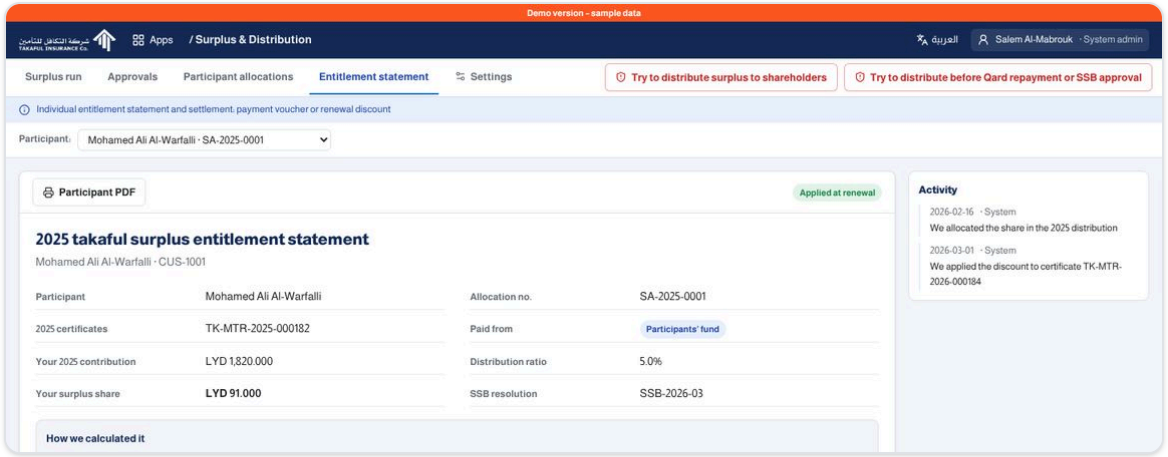

Surplus run: The 2025 surplus run step by step, from earned contributions to the distributable amount

Approvals: Approval chain: CFO, actuary, Sharia board, Board, after Qard Hasan repayment

Participant allocations: Each participant's pro rata share; the shares add up to the distributable amount

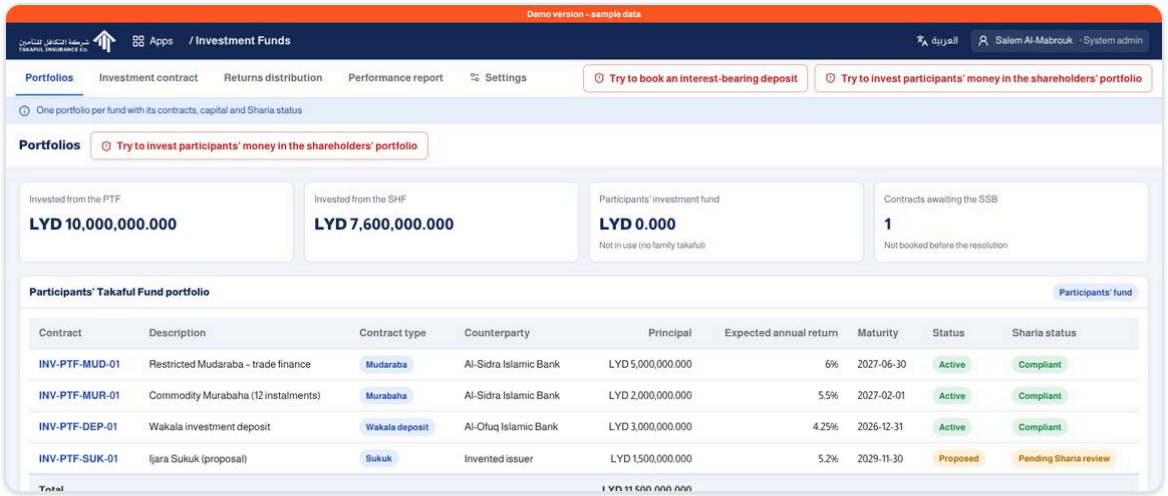

Entitlement statement: Individual entitlement statement and settlement: payment voucher or renewal discount

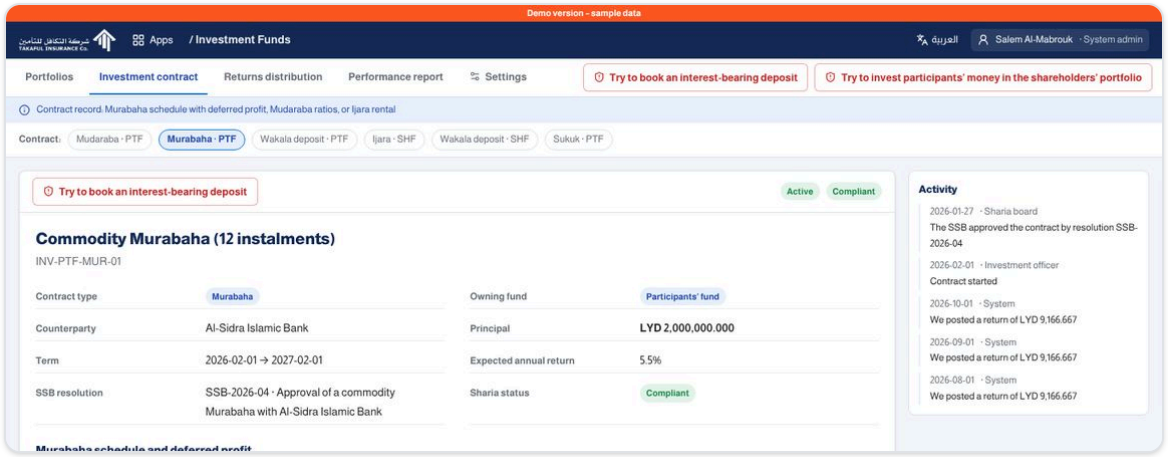

Investment Funds

Separate portfolios per fund with Murabaha, Mudaraba and Ijara, and returns split by the Mudarib share

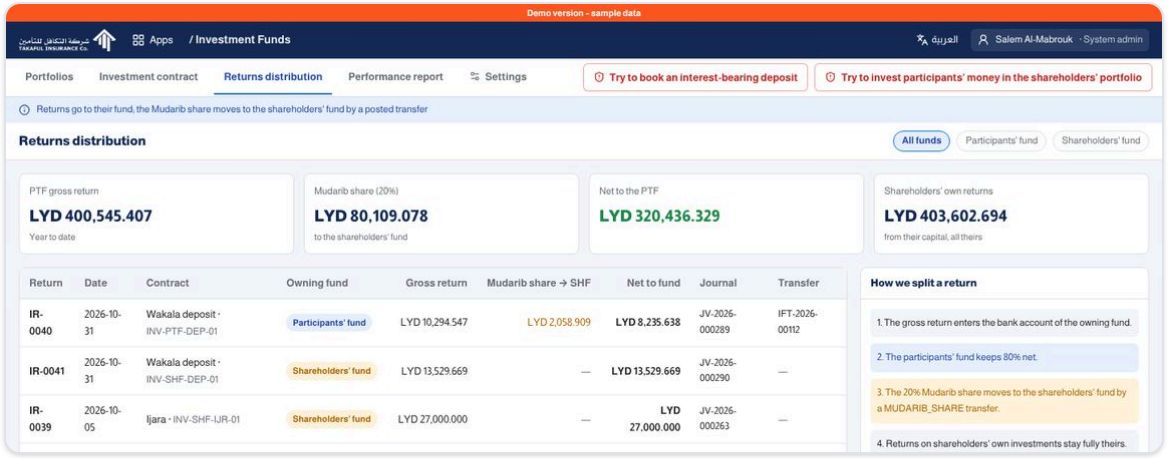

Proposal §3.12 | Sensitive module

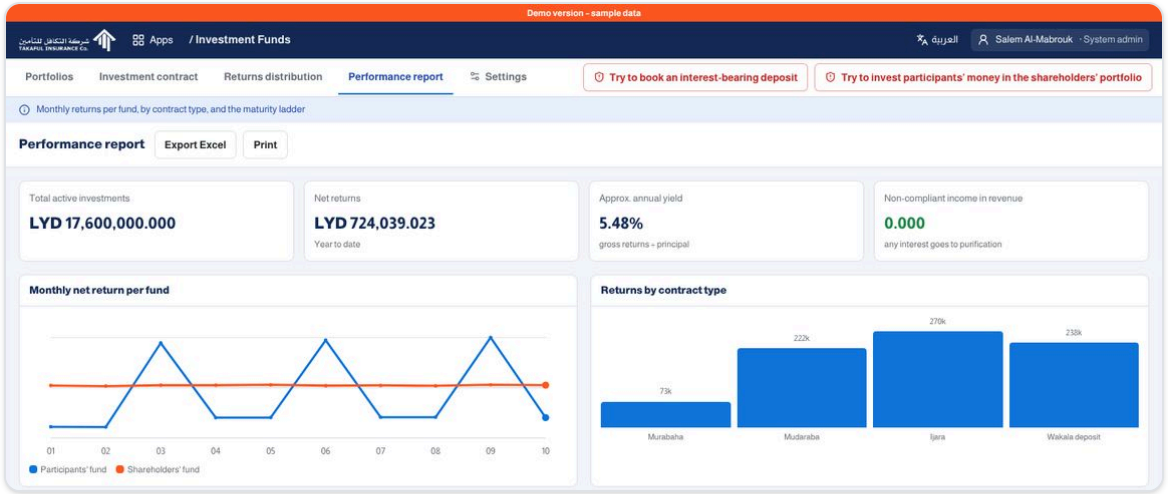

Portfolios: One portfolio per fund with its contracts, capital and Sharia status

Investment contract: Contract record: Murabaha schedule with deferred profit, Mudaraba ratios, or Ijara rental

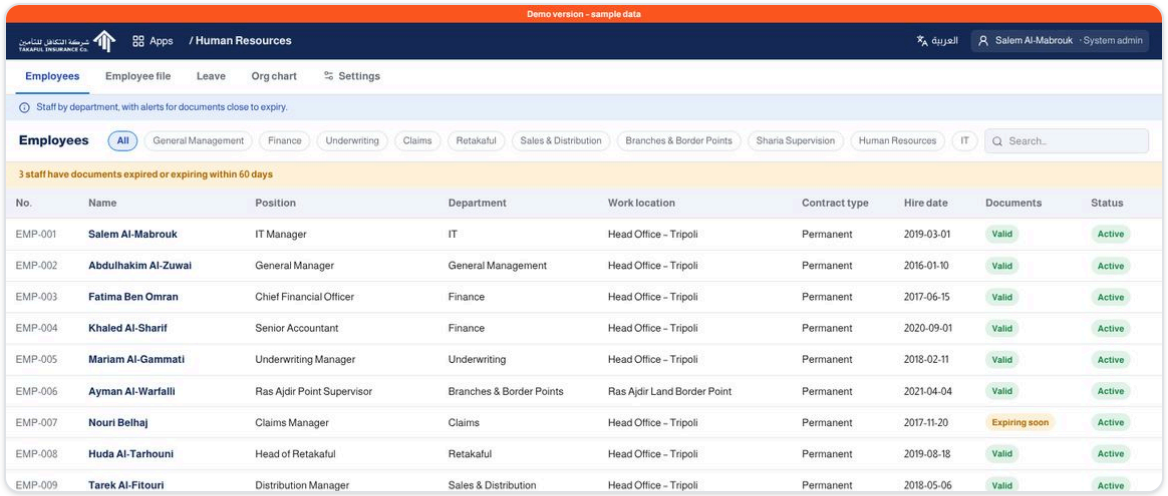

Returns distribution: Returns go to their fund; the Mudarib share moves to the shareholders' fund by a posted transfer

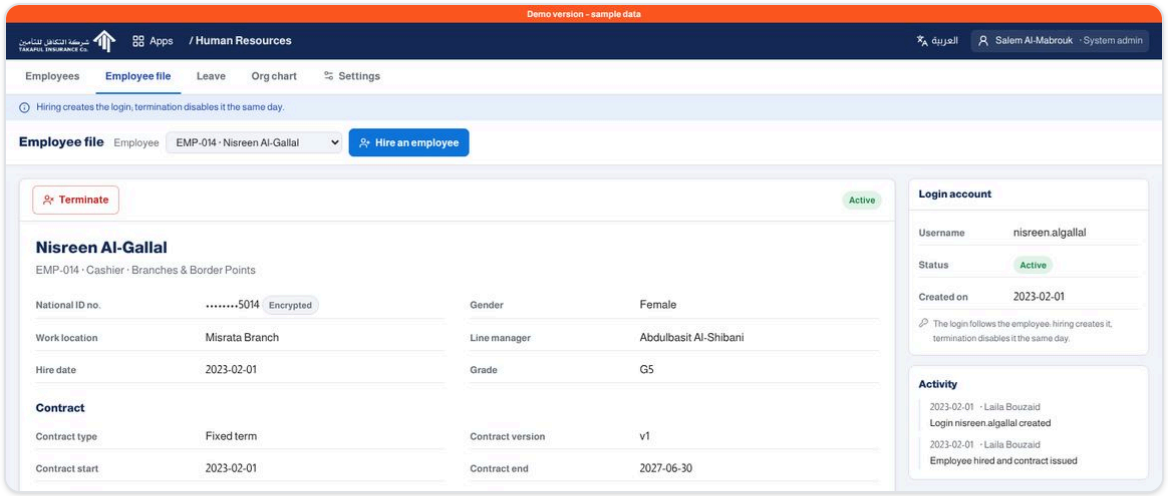

Performance report: Monthly returns per fund, by contract type, and the maturity ladder

Human Resources

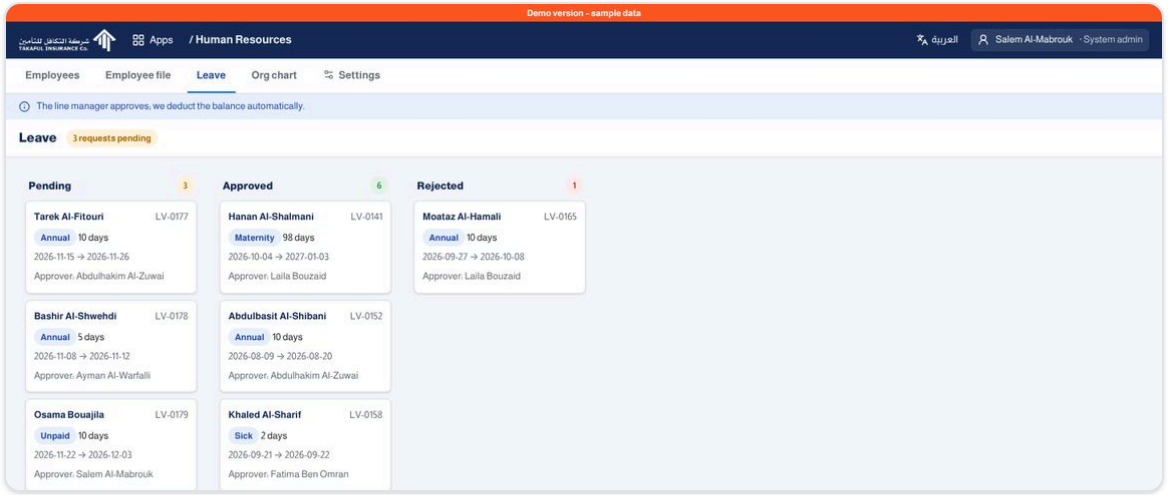

Staff files, contracts and leave; logins follow hiring

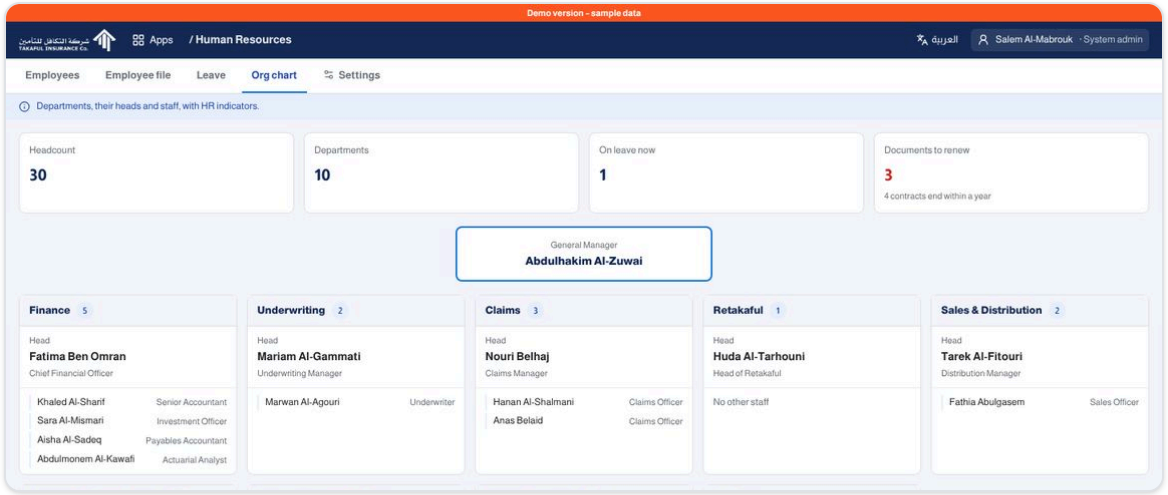

Employees: Staff by department, with alerts for documents close to expiry.

Employee file: Hiring creates the login; termination disables it the same day.

Leave: The line manager approves; we deduct the balance automatically.

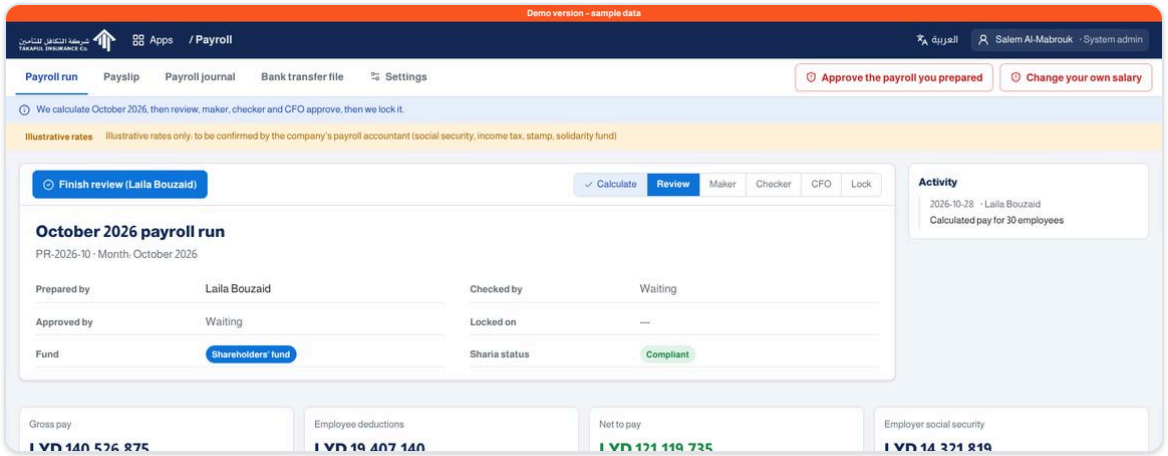

Org chart: Departments, their heads and staff, with HR indicators.

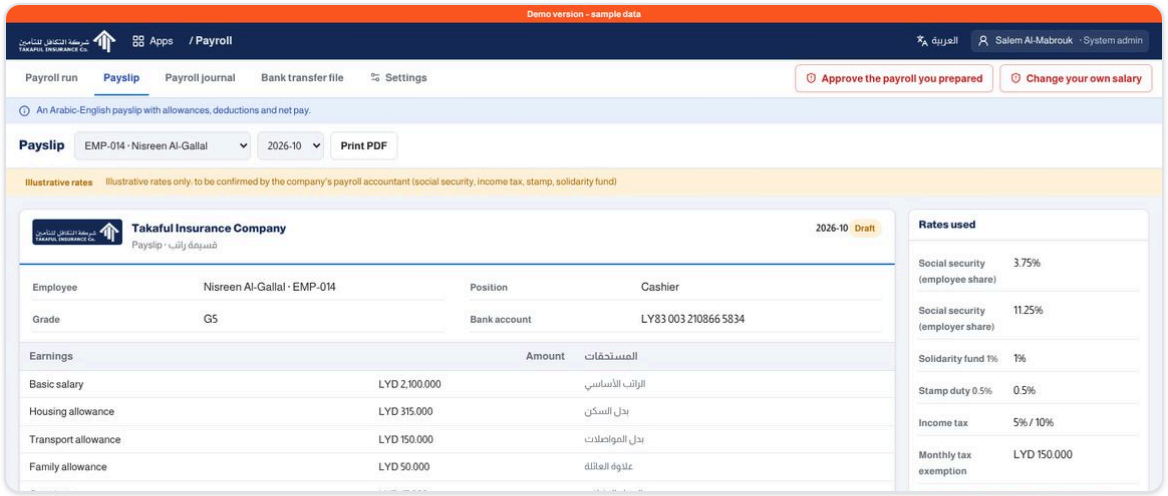

Payroll

Monthly run with maker-checker, posted to the shareholders' fund only

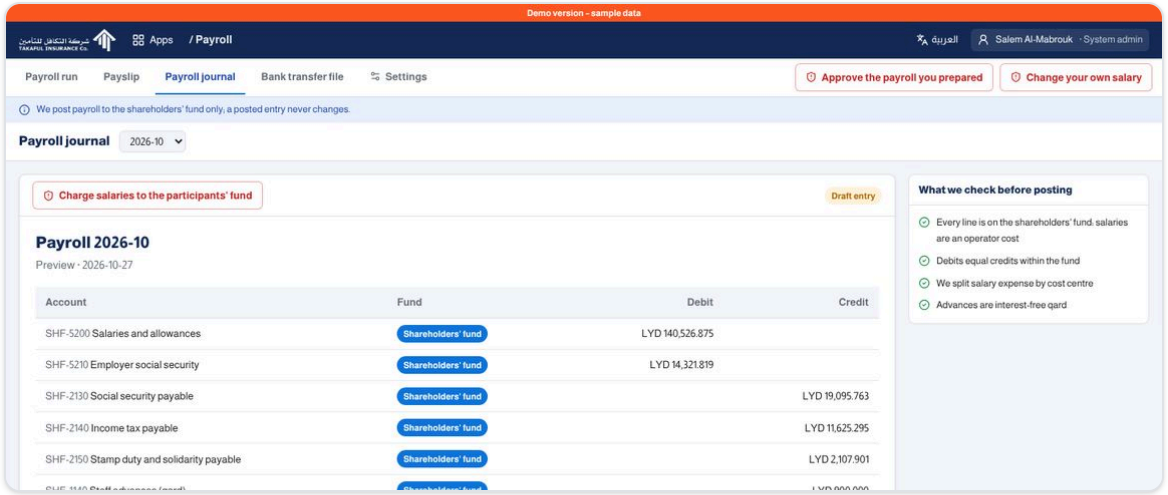

Sensitive module

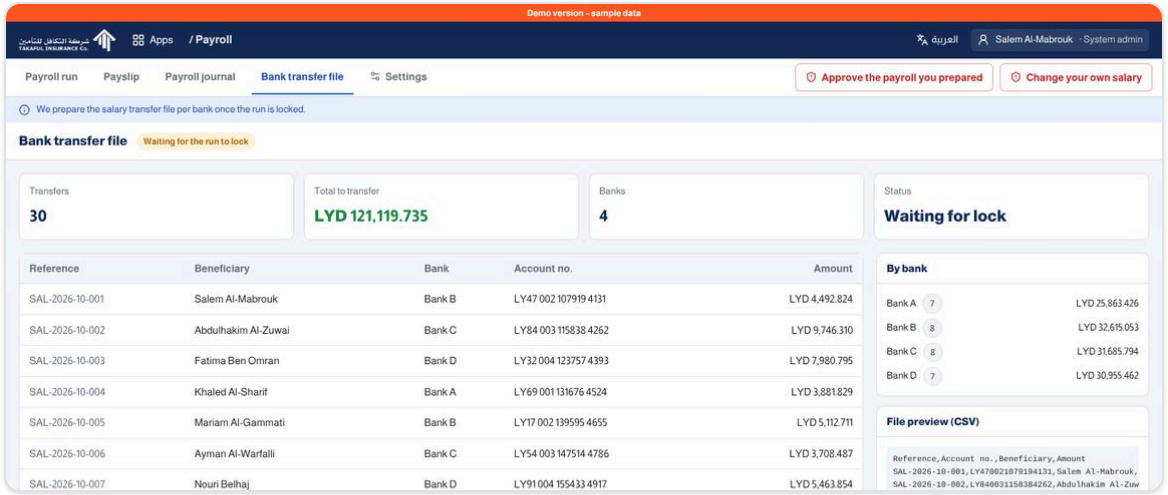

Payroll run: We calculate October 2026, then review, maker, checker and CFO approve, then we lock it.

Payslip: An Arabic-English payslip with allowances, deductions and net pay.

Payroll journal: We post payroll to the shareholders' fund only; a posted entry never changes.

Bank transfer file: We prepare the salary transfer file per bank once the run is locked.

Sensitive modules and how we protect them

The database itself refuses the mistake, not only the screen.

Customer management

A duplicate customer or false identity opens the door to issue and claims fraud

- We block saving on a matching national number and show the existing record
- Merging needs a second person's approval (maker-checker)

Claims

A claim that skips a stage, is approved by its own maker, or is paid from the wrong fund.

- Strict state machine: six stages in order in the API and database
- Maker-checker: the assessor never approves

Contributions & billing

A split error mixes participants' and shareholders' money; late-payment interest is riba

- Every receipt splits automatically by the certificate's approved split rule
- Each receipt's journal balances inside each fund and locks once posted

Accounting & Finance

Mixing participants' and shareholders' money, or editing a posted entry, corrupts the books and breaches Sharia

- Every journal line carries one fund; the account belongs to that fund
- The database rejects any journal that does not balance inside each fund

Sharia Compliance

Sharia status changed by someone outside the SSB, or funds mixed without a trail the Sharia auditor can see

- Sharia status is mandatory on every contract and transaction; never empty
- Only the SSB changes a status, with a written reason and a permanent log

Surplus & Distribution

Paying surplus to shareholders, or before Qard Hasan repayment and SSB approval, breaches the Articles and Sharia

- A fixed formula shown line by line, no manual figures
- We repay Qard Hasan first, then distribute the rest

Investment Funds

Interest-bearing (riba) investments, or pooling participants' investments with shareholders' money

- Every contract and counterparty needs an SSB resolution before booking
- One portfolio per fund; we never pool their money

Payroll

Salaries are confidential; an error or fraud pays out shareholders' money wrongly.

- Whoever prepares the run cannot approve it: checker, then CFO
- Salary fields are encrypted; only payroll roles see them

Hosting on your servers or in the cloud

- We ship Docker images: the app, the background worker and PostgreSQL.
- They run on your on-site servers, AWS or Azure without changes.
- Three independent environments: development, test, production.
- Daily backups and regular restore tests.
- We migrate your data from the current system (Oracle) after reconciling it.

Built in 30 days

Week 1: foundation, customers, products

Week 2: underwriting, policies, billing, accounting

Week 3: claims, retakaful, agents, Sharia, investments, surplus

Week 4: reports, HR & payroll, testing and UAT

Then: 5-day training, go-live, 15-day follow-up and 6-month warranty.

We need only a few answers from you

We set everything else as defaults you can change later.

1. What is your current core system and version, which database, and who holds database access?
2. Where do your servers run today? Describe CPU, RAM, storage, OS, virtualization, backups and internet link.
3. Which data should we bring over, and how many years of history?
4. What is the Wakala % per line, and the Mudarib share of investment returns?
5. Please send your current chart of accounts. When does your fiscal year start?
6. Which products and sub-products do you sell today? Please send the tariff for each.
7. How many branches, border points and agents do you have? How good is internet at border points?
8. Which banks and payment channels do you use today?
9. Which retakaful treaties are in force? Give reinsurer, type and retention for each.
10. Who sits on the Sharia board, how does it approve, and do you want e-signature and stamp?
11. Please send the staff list by department and job. We build users and roles from it.
12. Do you confirm the social security, tax, stamp and solidarity rates? Which HR/payroll tool do you use?

Next steps

1. Try the demo and pick any role.
2. Answer the questions and rank the modules.
3. Review the dictionary and change any term.
4. We start building as soon as the answers arrive.
