Fourteen modules, one platform

The twelve modules of the technical proposal, plus HR and payroll.

Customer management

Policy issue & renewal

Underwriting & risk

Claims

Retakaful

Contributions & billing

Agents & brokers

Accounting & Finance

Dashboards & reports

Sharia Compliance

Surplus & Distribution

Investment Funds

Human Resources

Payroll

Sensitive module

The participant's journey through the platform

1 Customer sign-up and identity check

Customer management

2 Instant rule-based underwriting

Underwriting & risk

3 Signed PDF policy with QR code

Policy issue & renewal

4 Contribution collected and split by fund

Contributions & billing

5 Claim settled in 6 stages

Claims

6 Automatic retakaful recovery

Retakaful

7 Surplus shared with participants

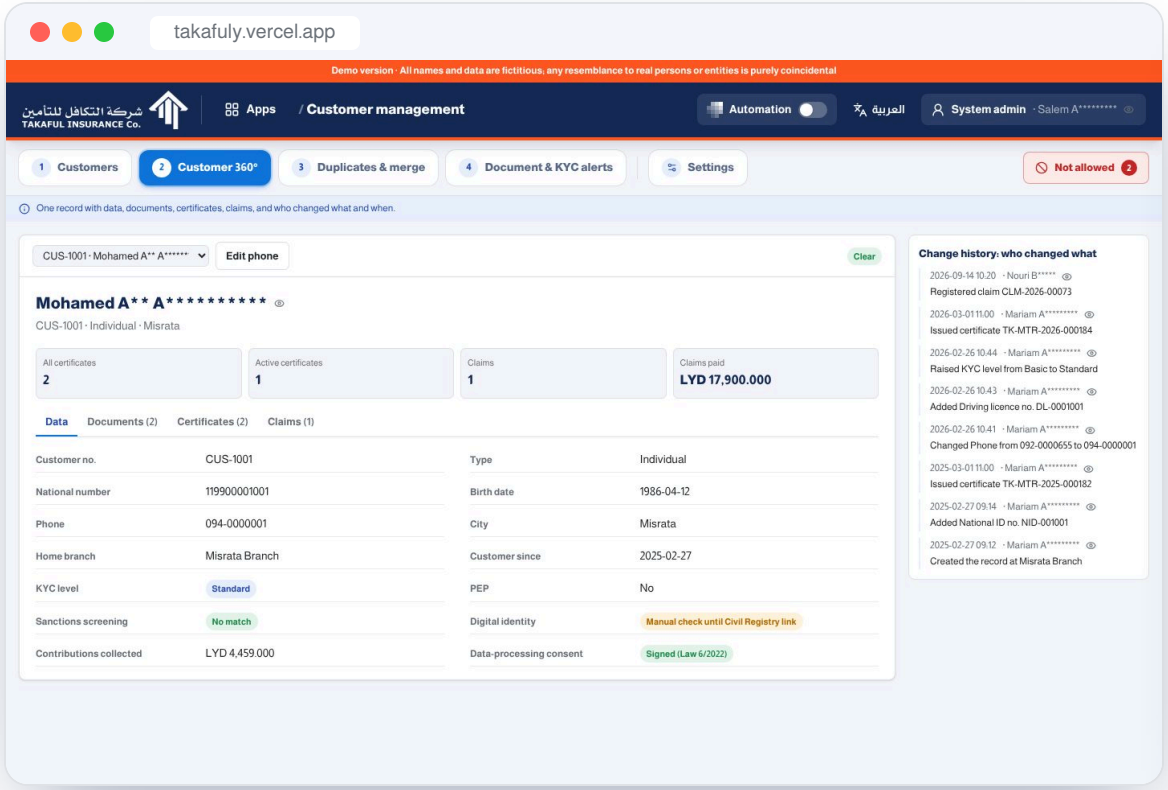

Surplus & Distribution

Customer management

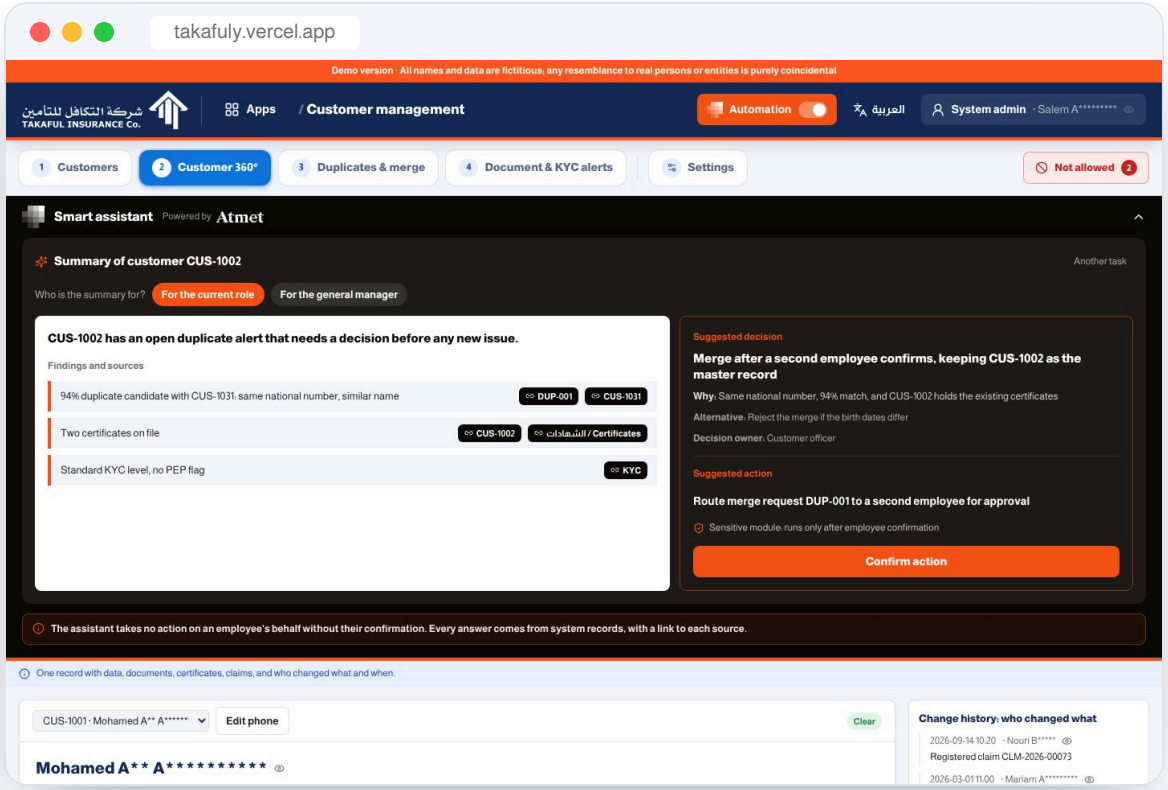

One record per customer: documents, certificates, claims and every change

Powered by Atmet

Before automation

After automation

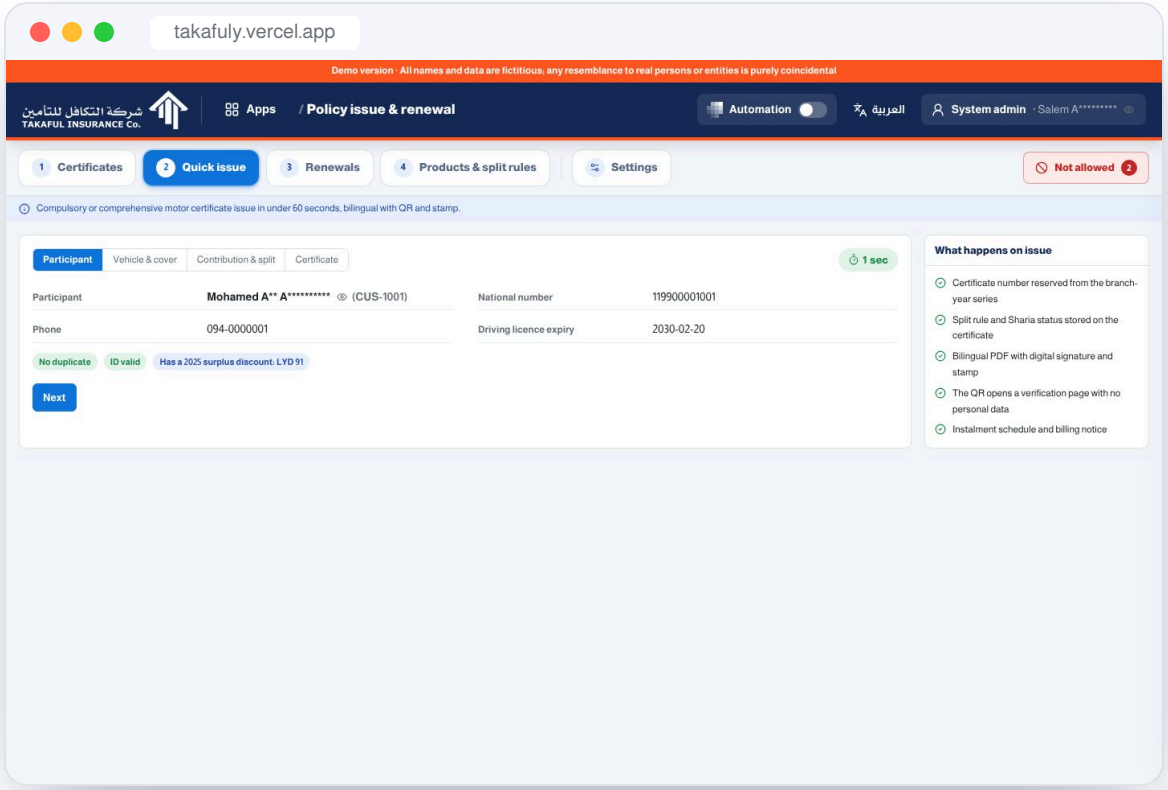

Policy issue & renewal

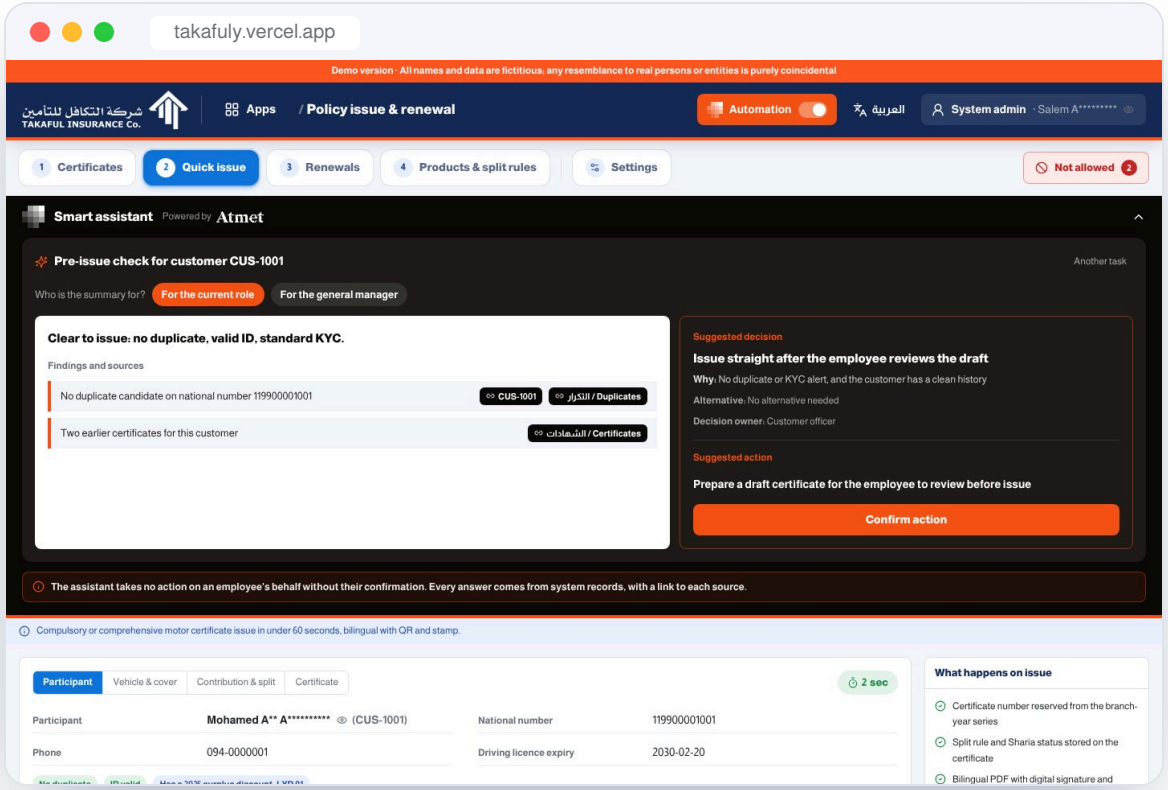

Takaful certificate issue in a minute, with a renewal reminder 30 days before expiry

Powered by Atmet

Before automation

After automation

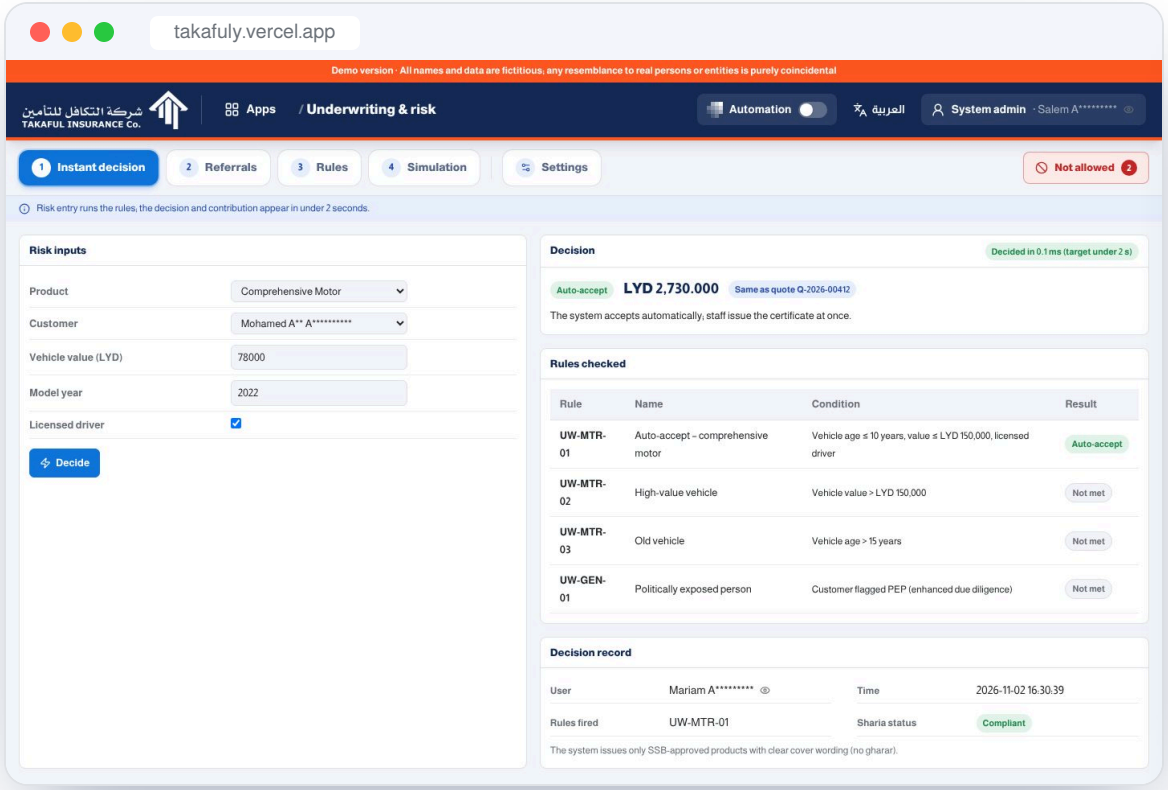

Underwriting & risk

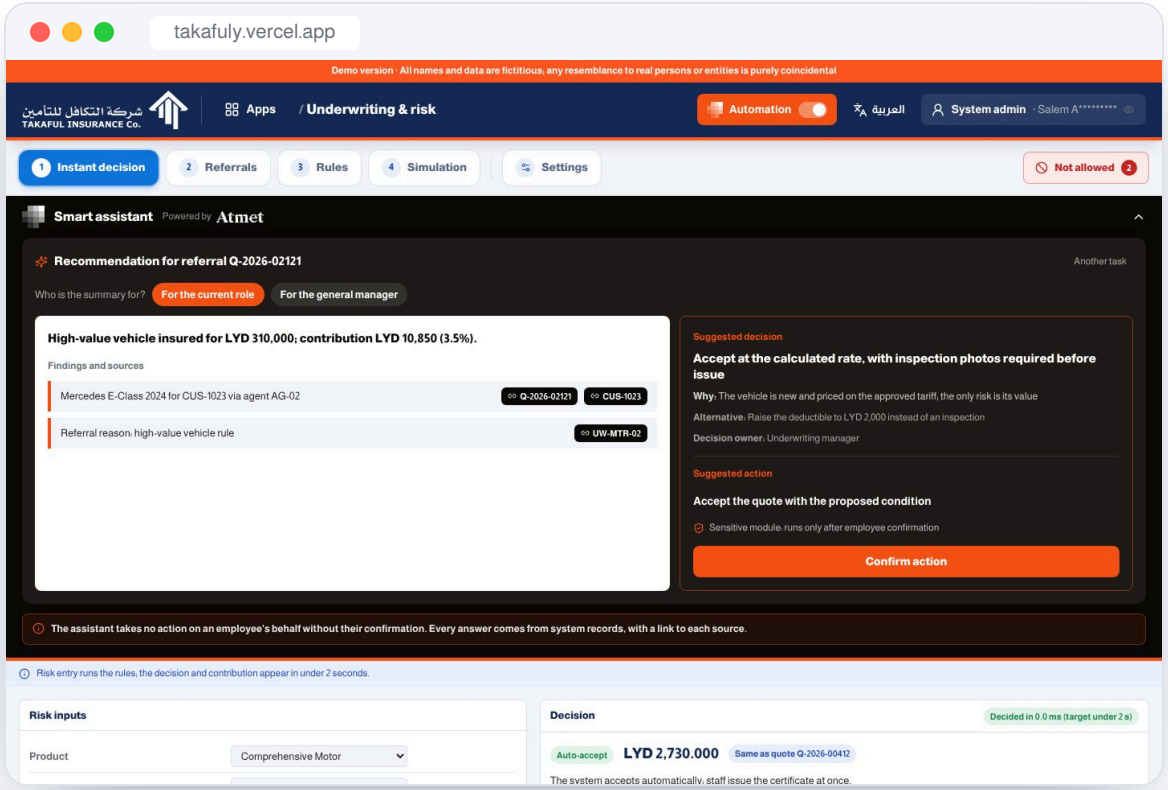

Instant decisions for normal cases; complex ones go to the approval matrix

Powered by Atmet

Before automation

After automation

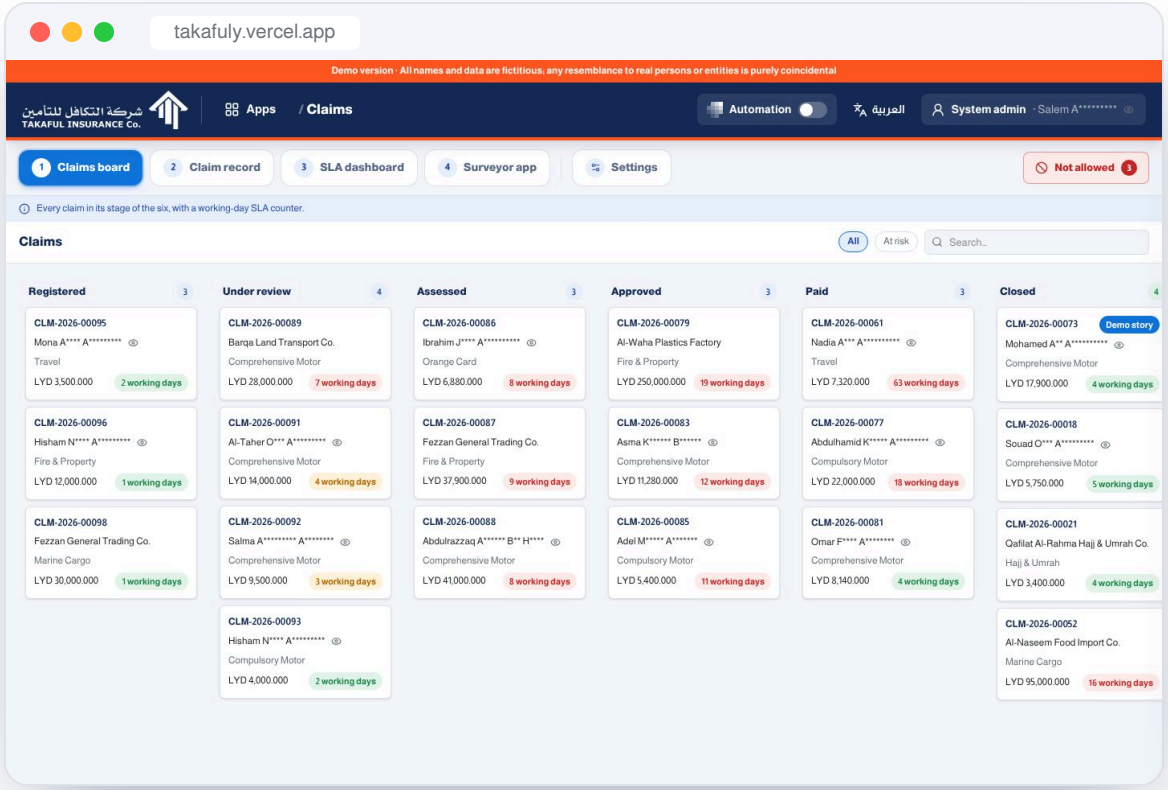

Claims

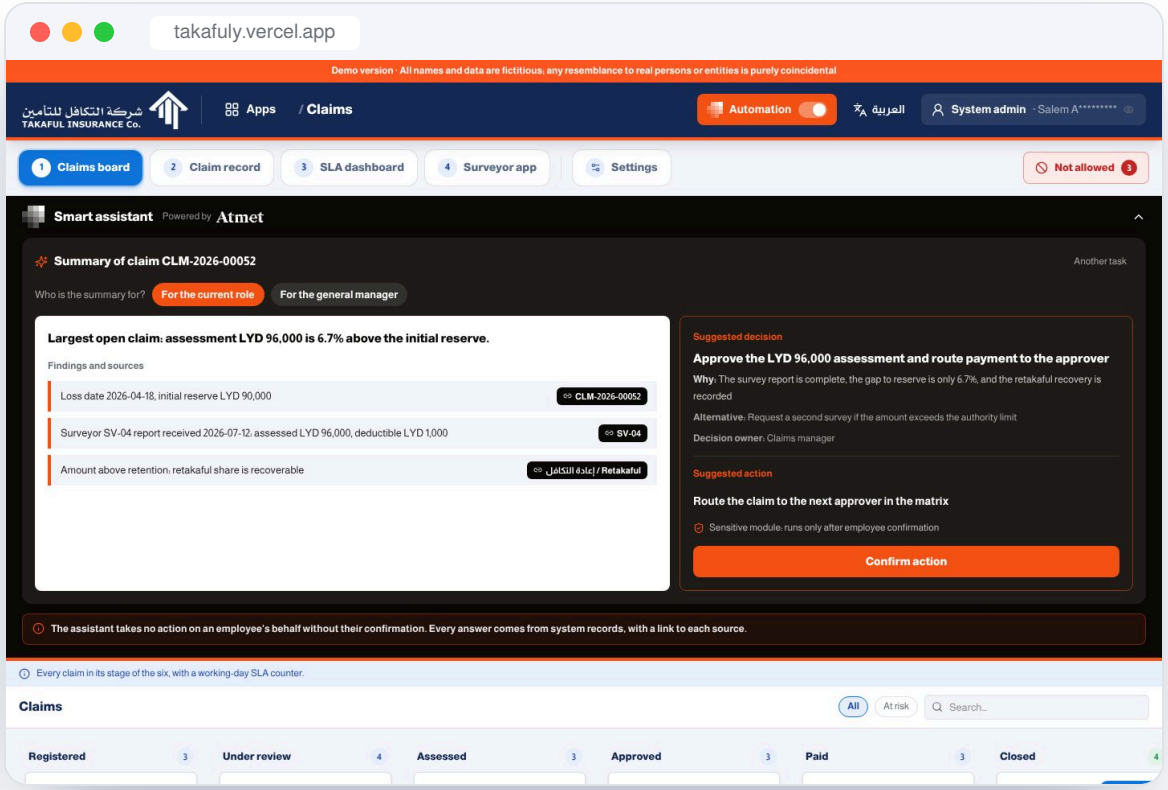

Six strict stages; paid in under 5 working days

Powered by Atmet

Before automation

After automation

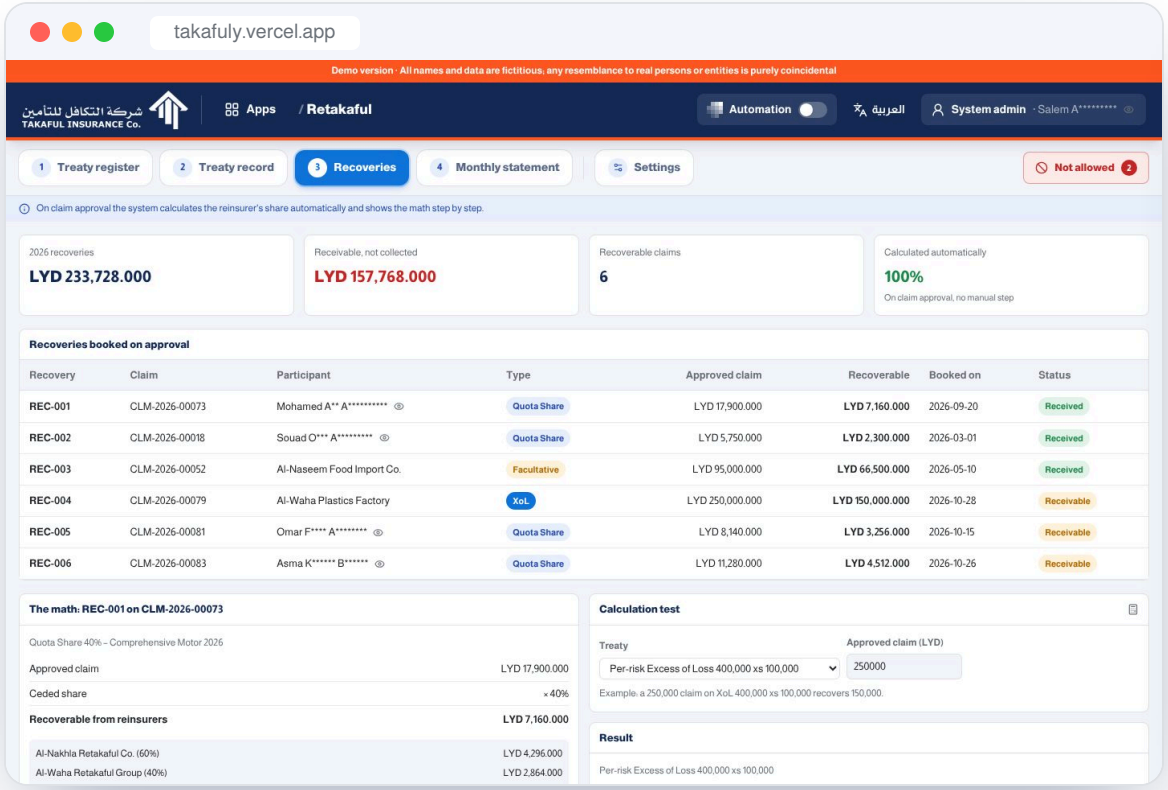

Retakaful

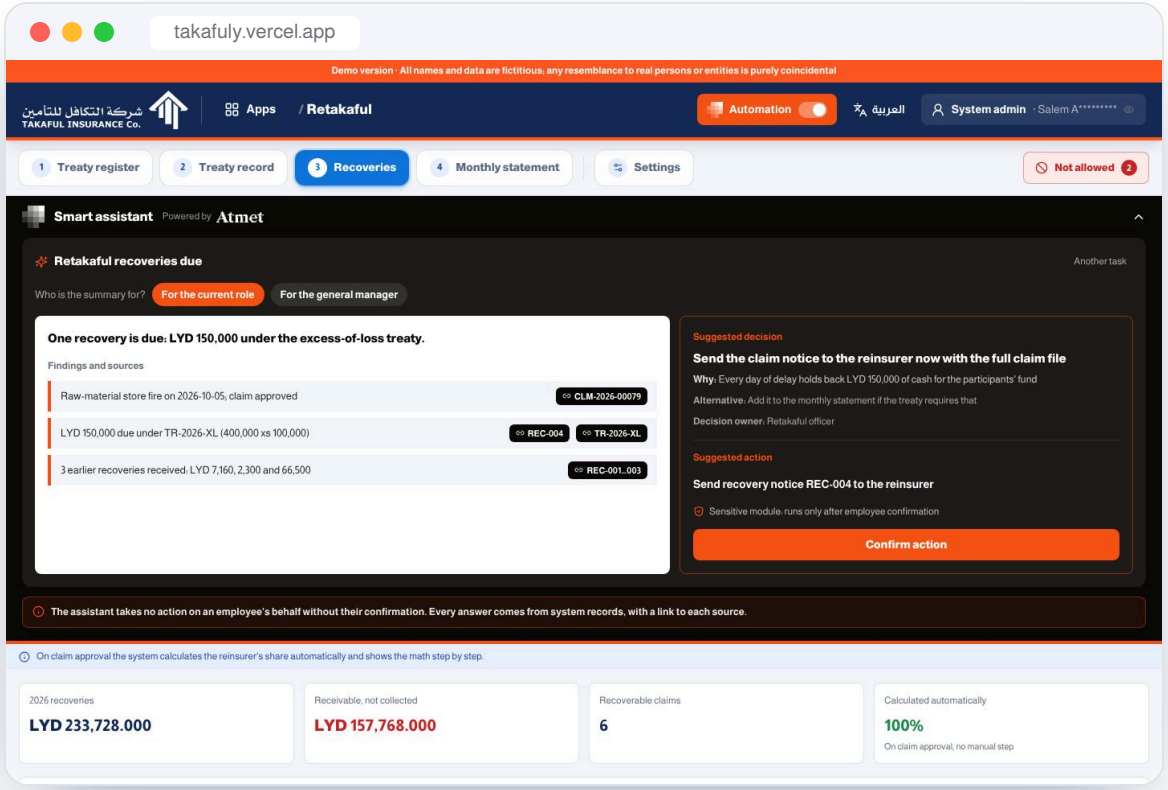

Treaties, automatic cessions and recoveries, monthly reconciliation

Powered by Atmet

Before automation

After automation

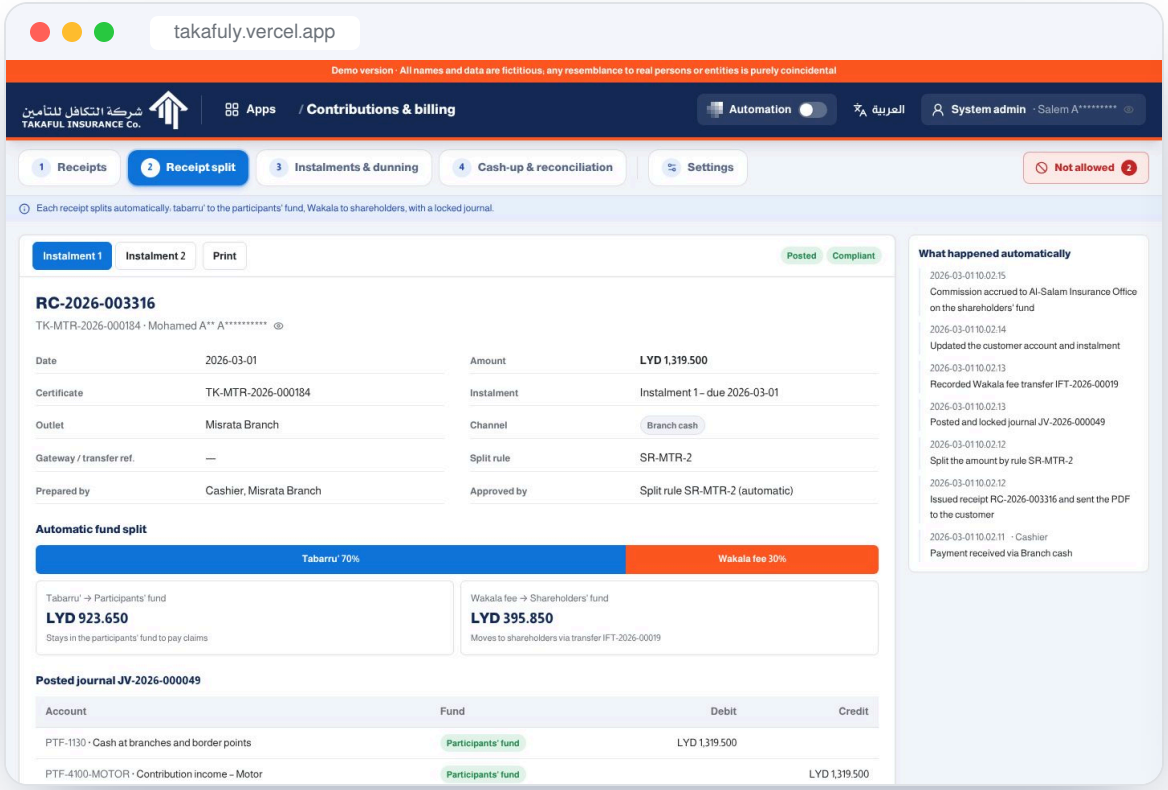

Contributions & billing

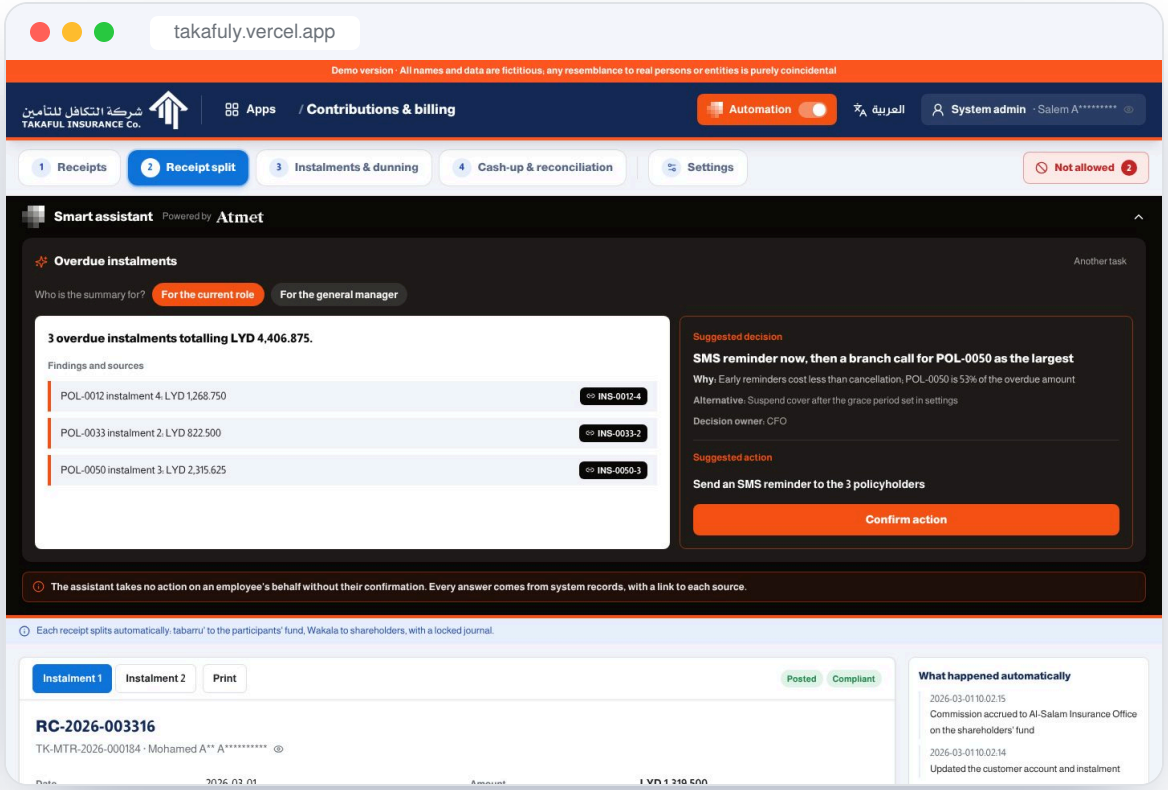

Contribution collection on every channel, with an automatic split between the funds

Powered by Atmet

Before automation

After automation

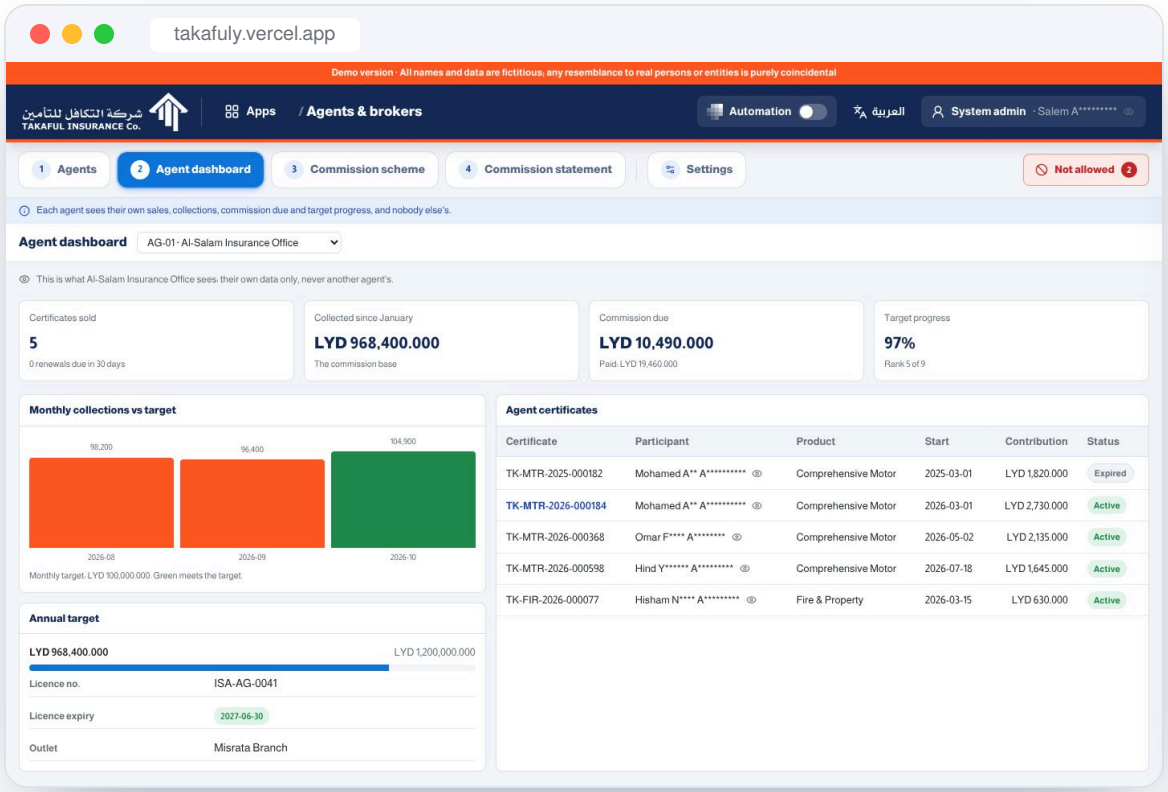

Agents & brokers

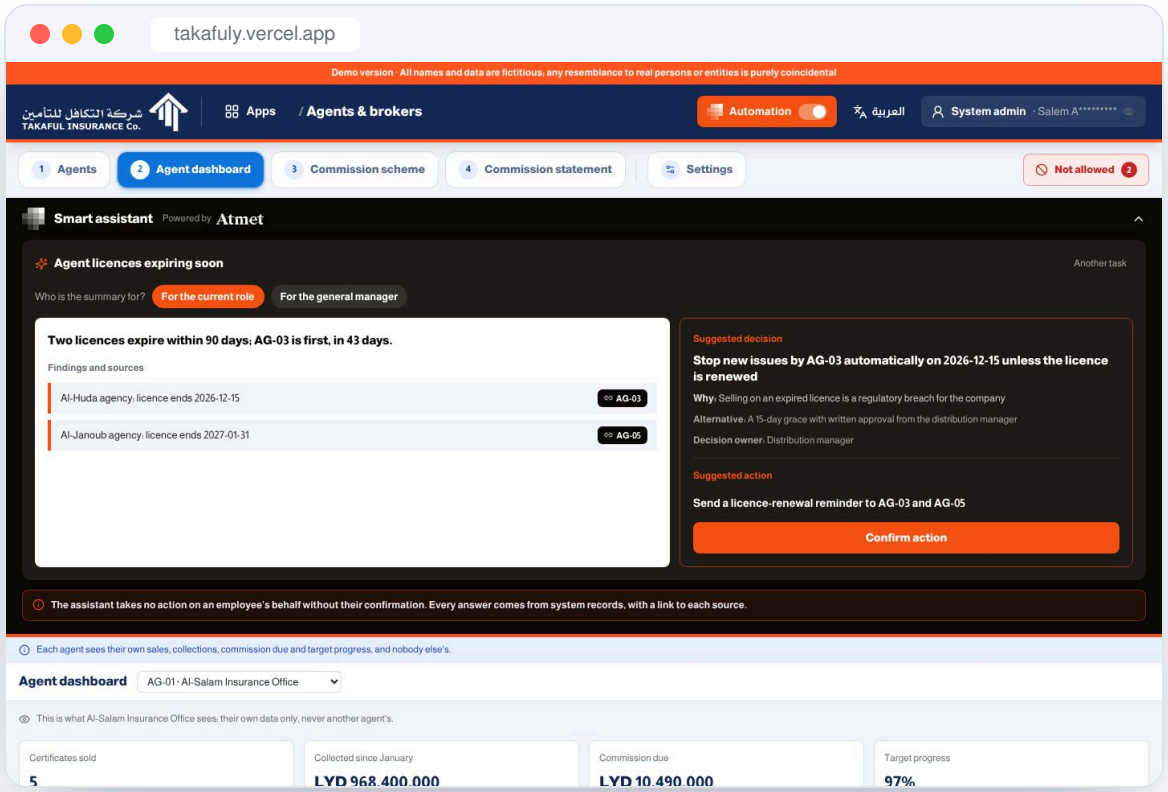

A dashboard per agent and tiered commission on collected business only

Powered by Atmet

Before automation

After automation

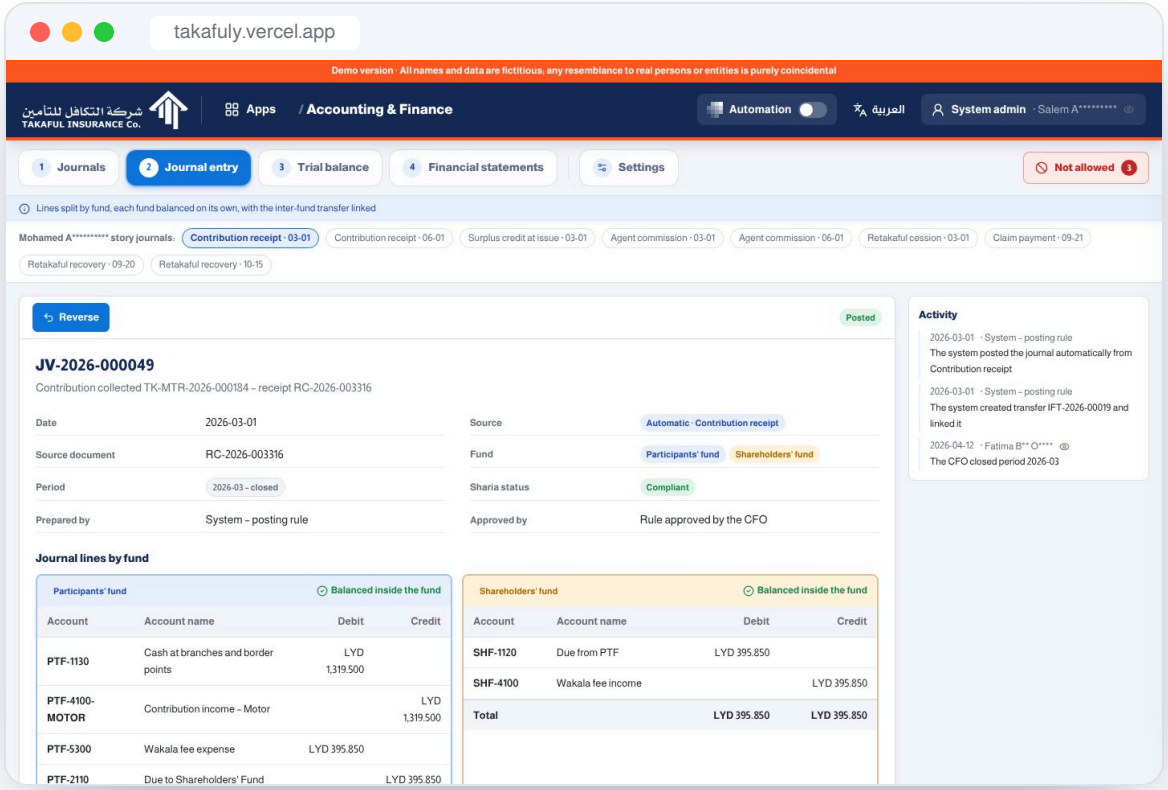

Accounting & Finance

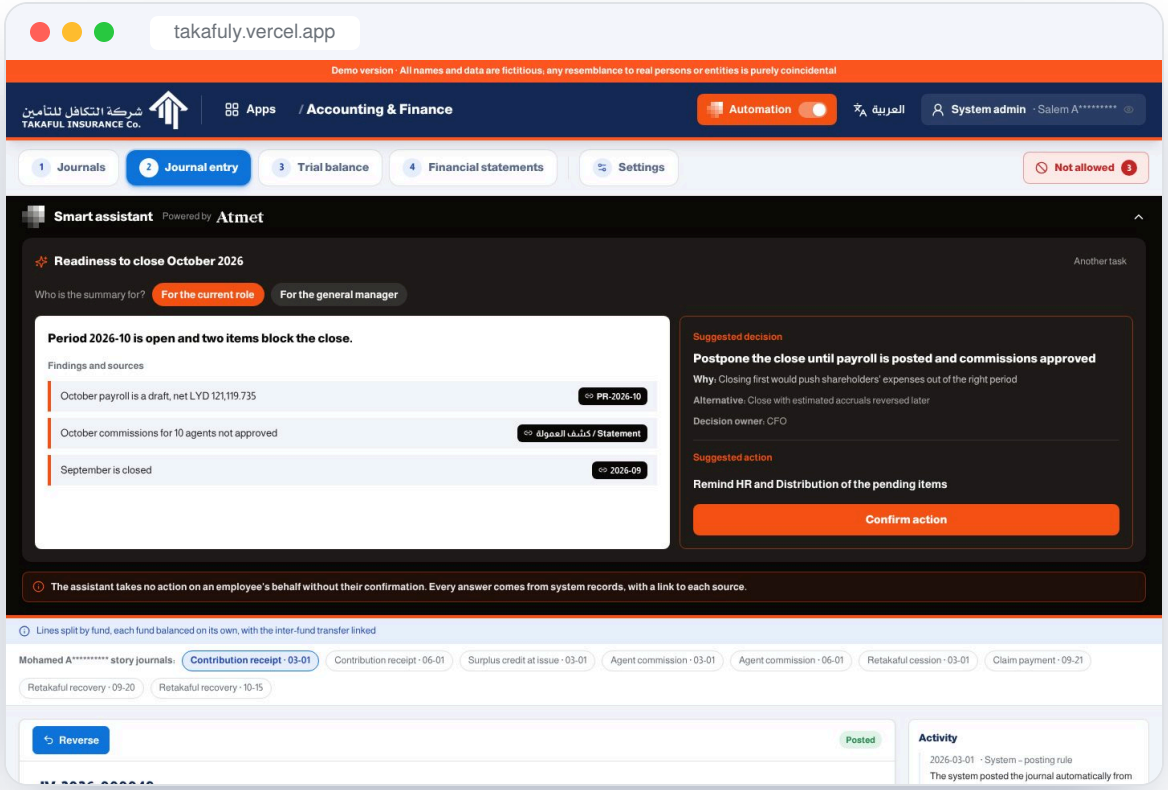

Automatic journals for every action, each fund balanced on its own, statements in one click

Powered by Atmet

Before automation

After automation

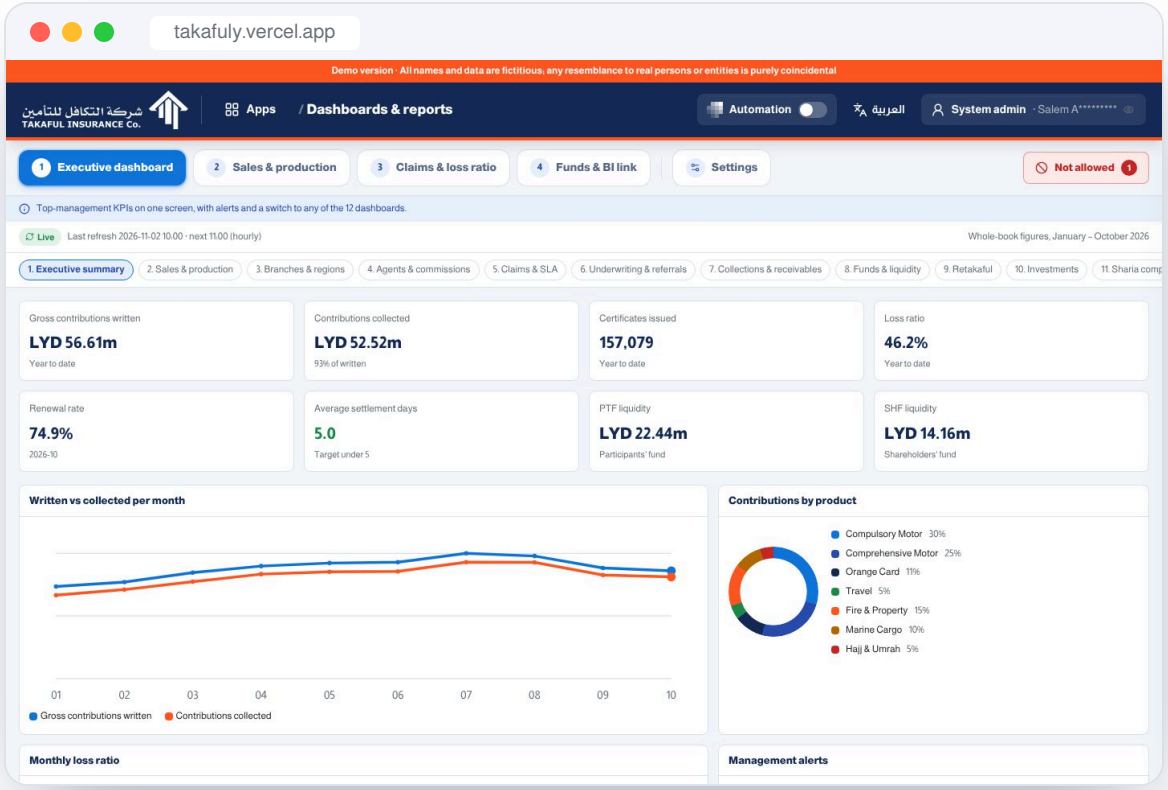

Dashboards & reports

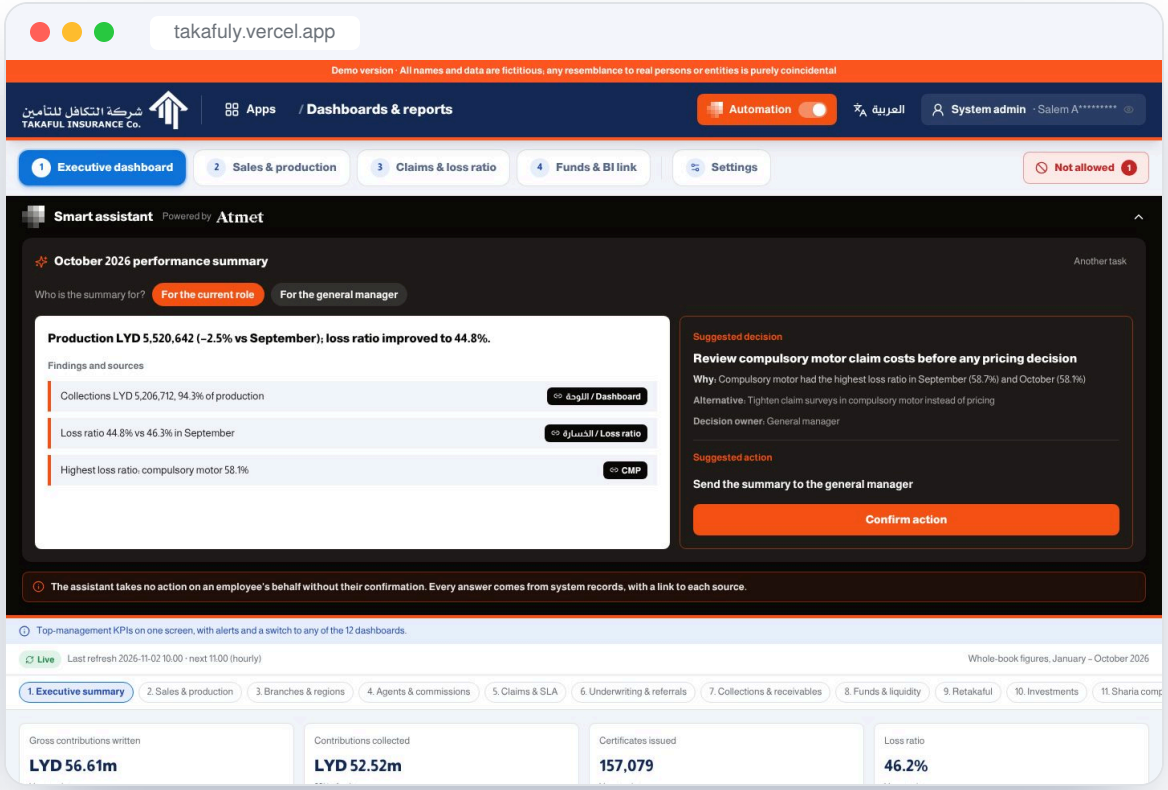

24 KPIs and 12 interactive dashboards refreshed hourly, linked to Metabase or Power BI

Powered by Atmet

Before automation

After automation

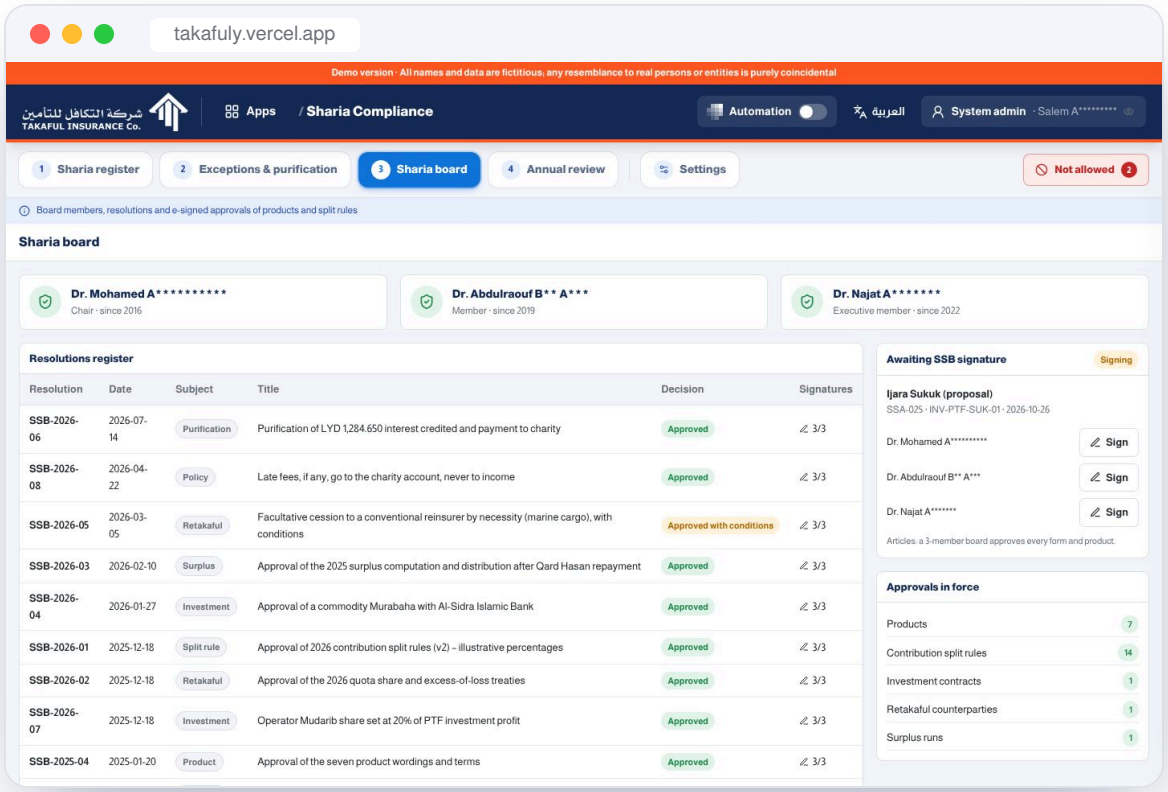

Sharia Compliance

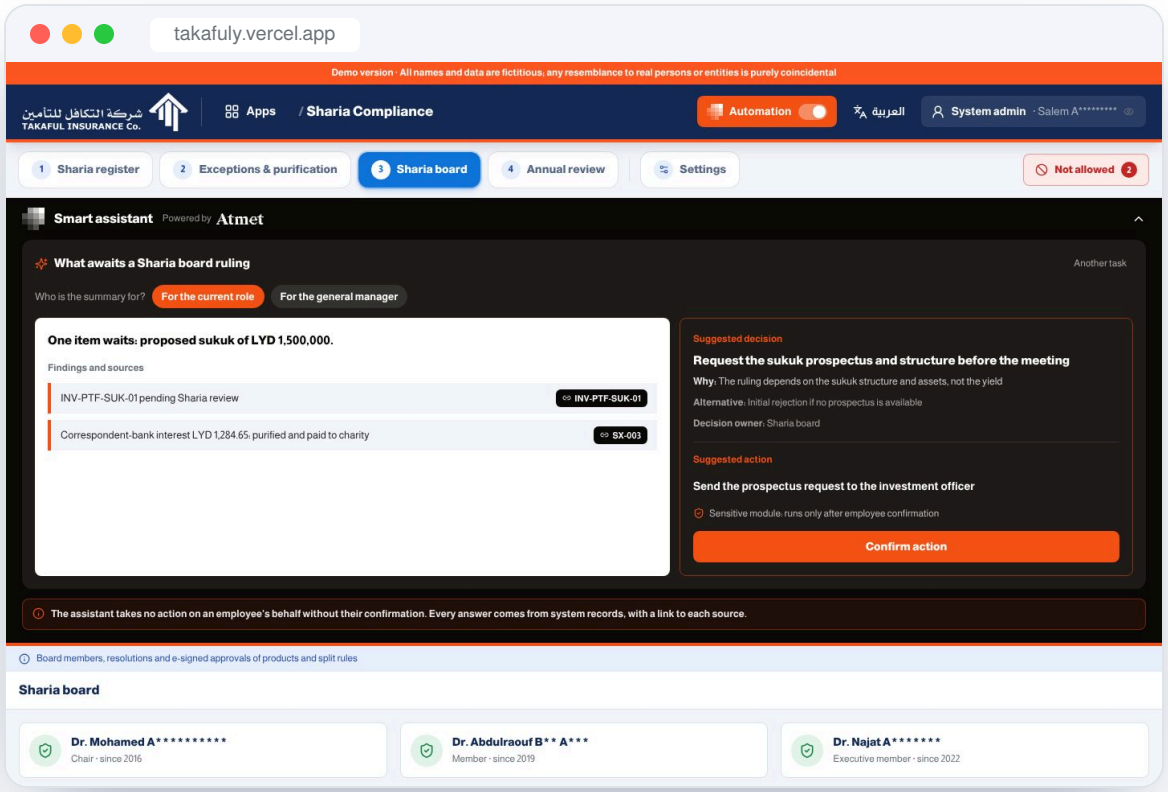

Sharia status on every contract and transaction, exceptions log, SSB resolutions and the compliance certificate

Powered by Atmet

Before automation

After automation

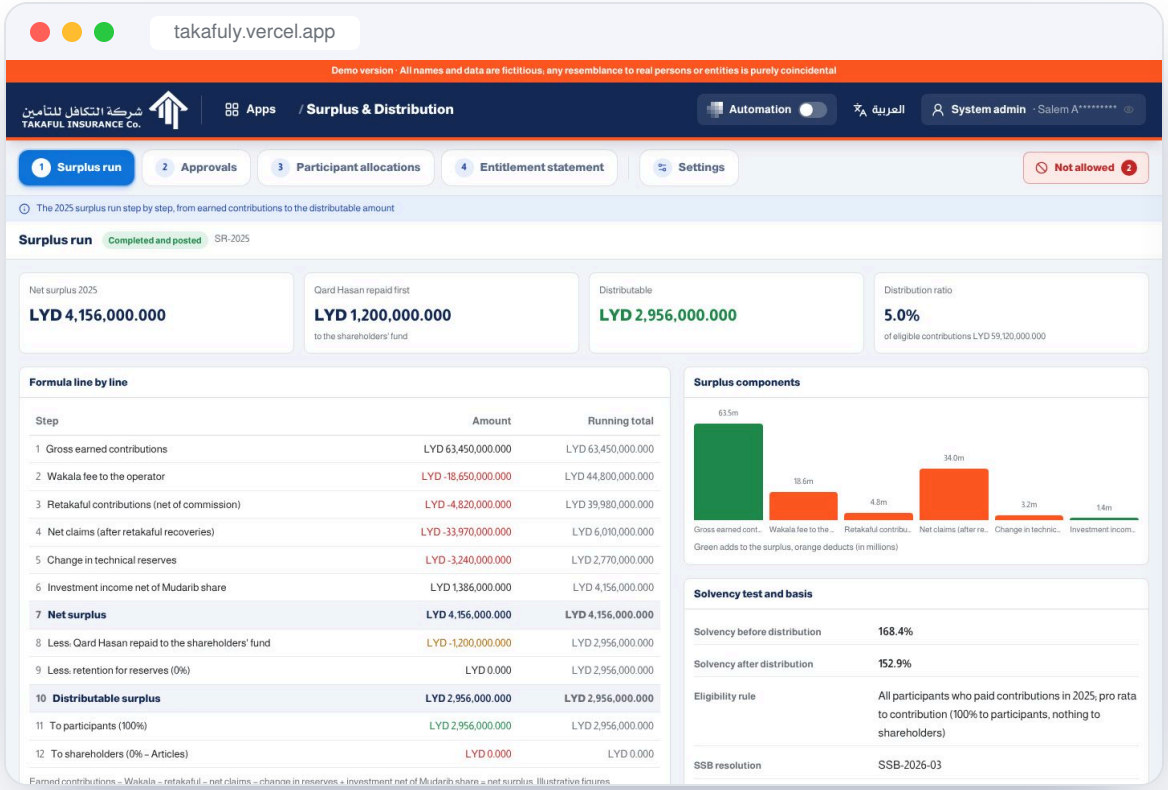

Surplus & Distribution

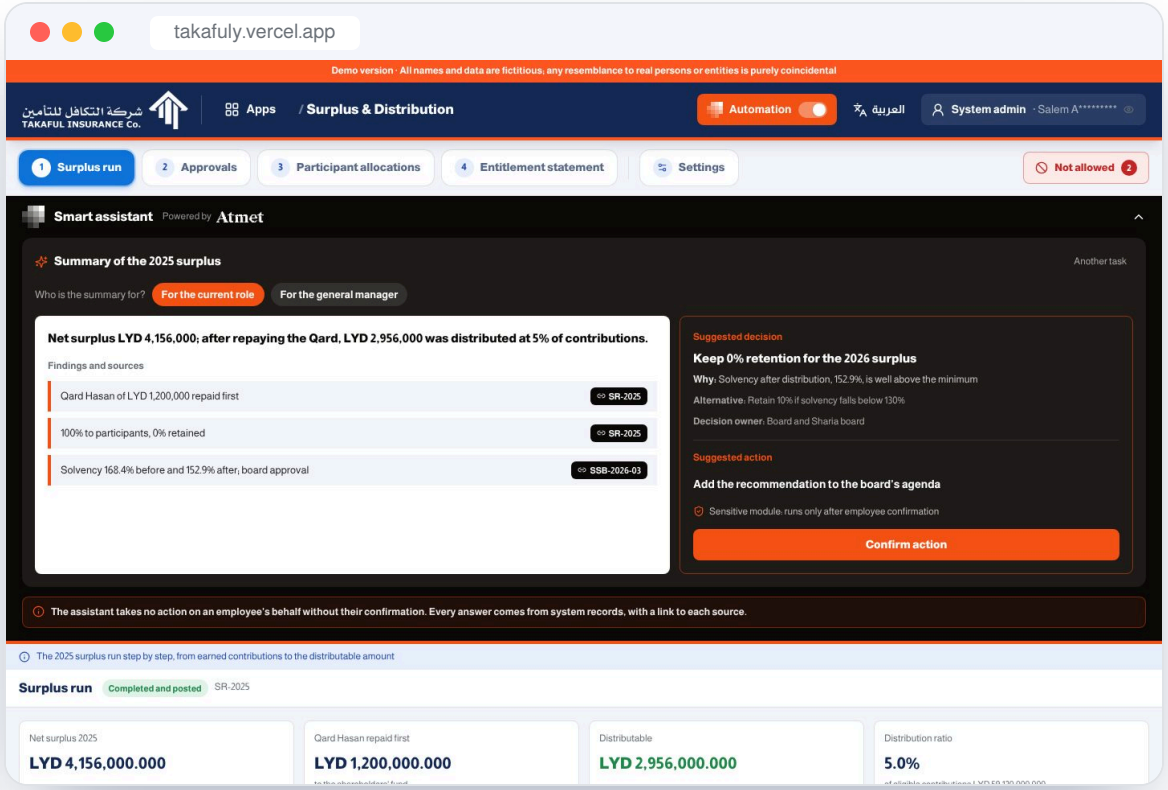

Step-by-step takaful surplus calculation, with 100% distributed to participants pro rata

Powered by Atmet

Before automation

After automation

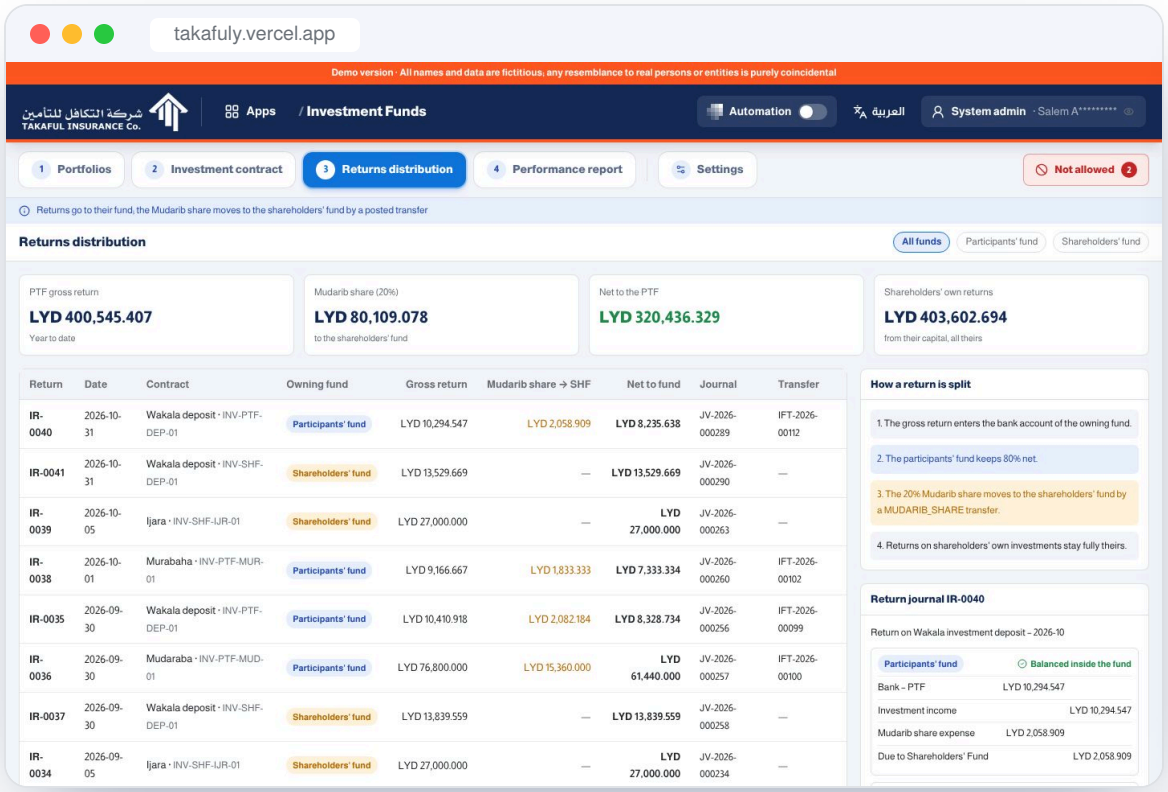

Investment Funds

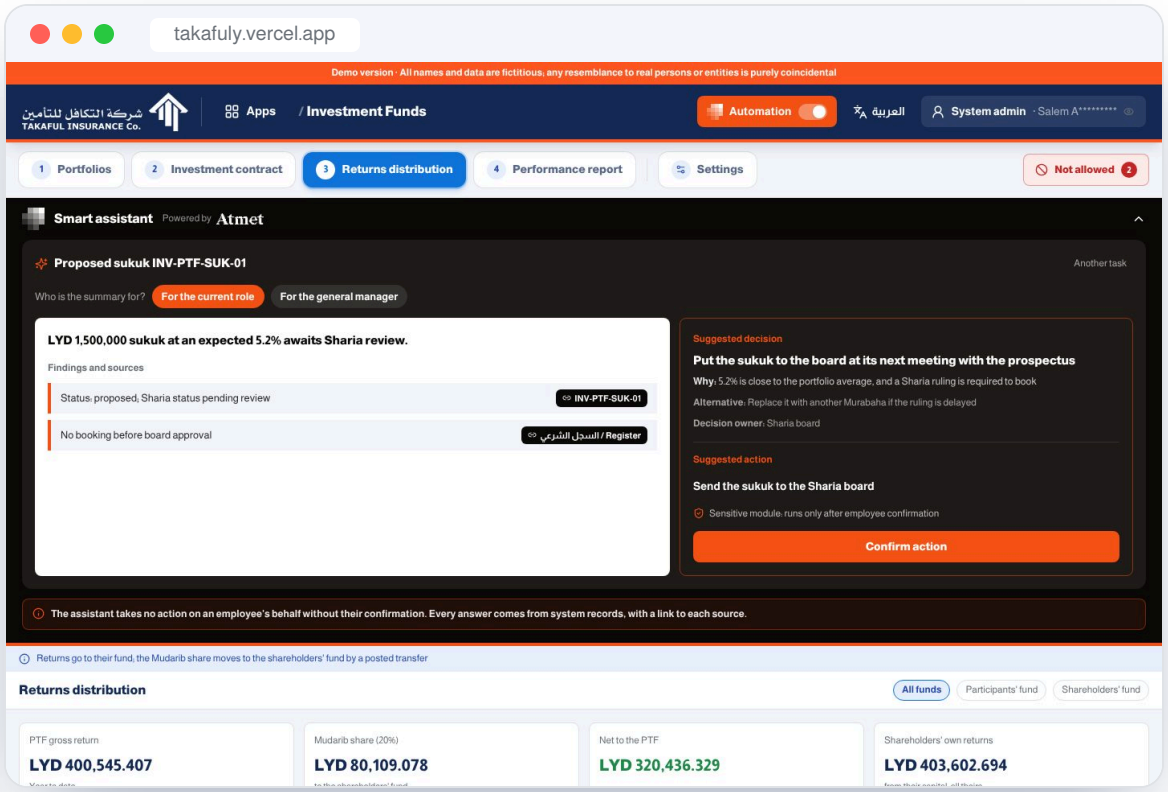

Separate portfolios per fund with Murabaha, Mudaraba and Ijara, and returns split by the Mudarib share

Powered by Atmet

Before automation

After automation

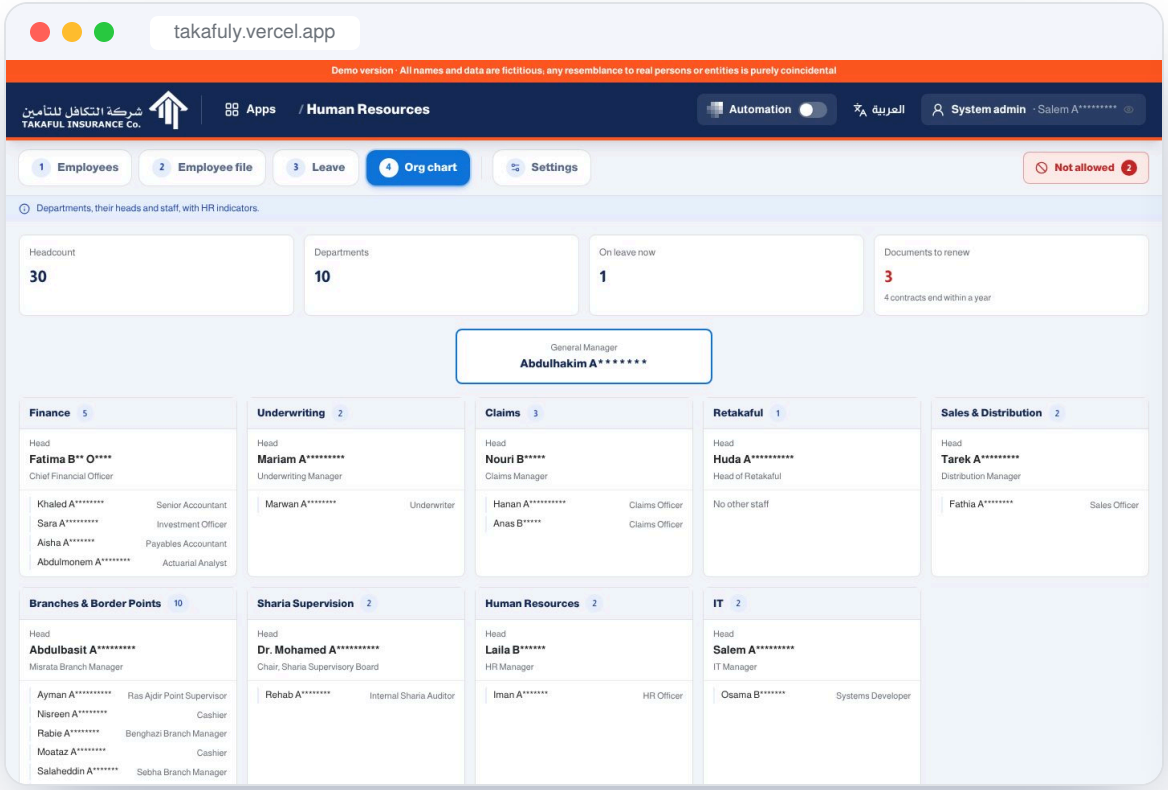

Human Resources

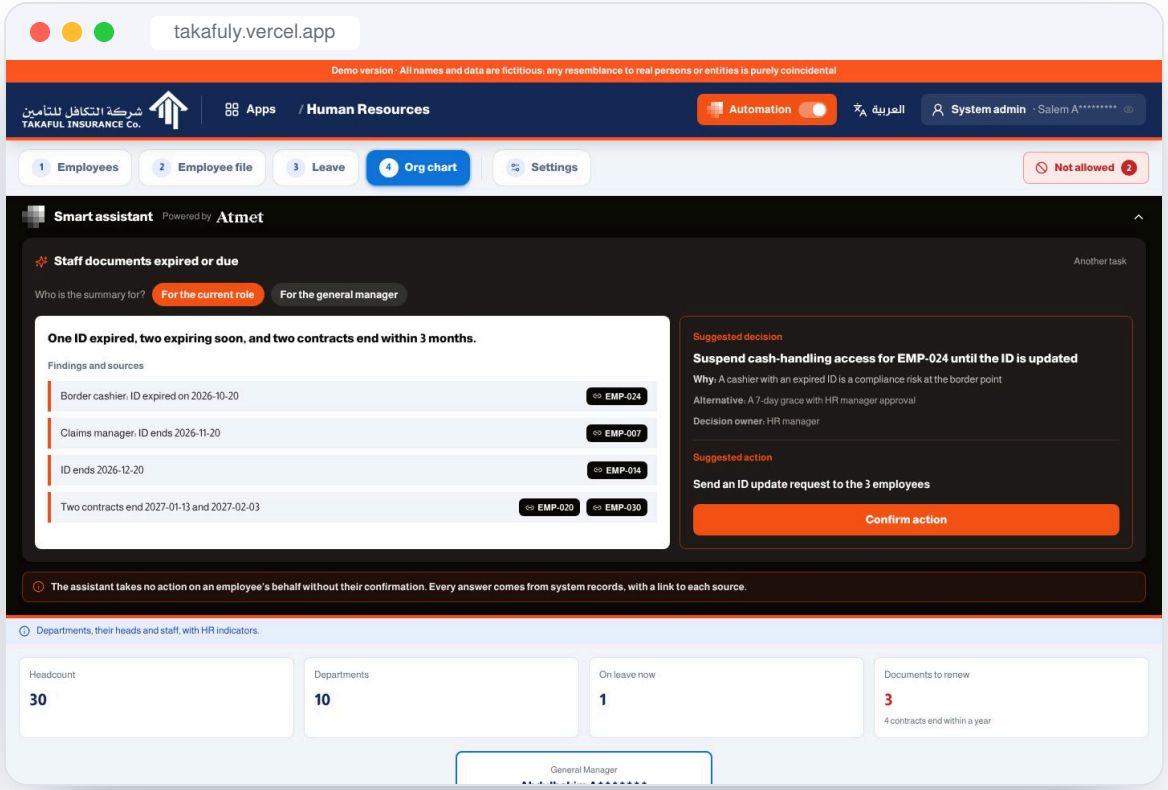

Staff files, contracts and leave; logins follow hiring

Powered by Atmet

Before automation

After automation

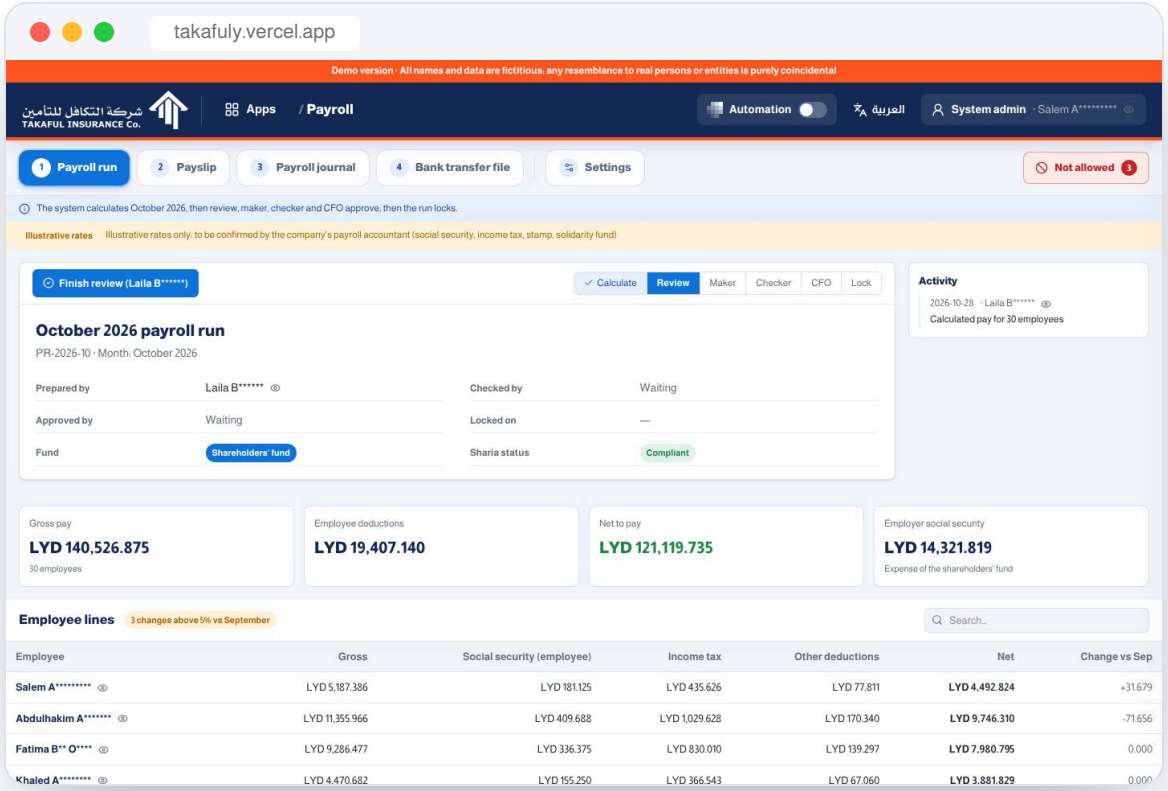

Payroll

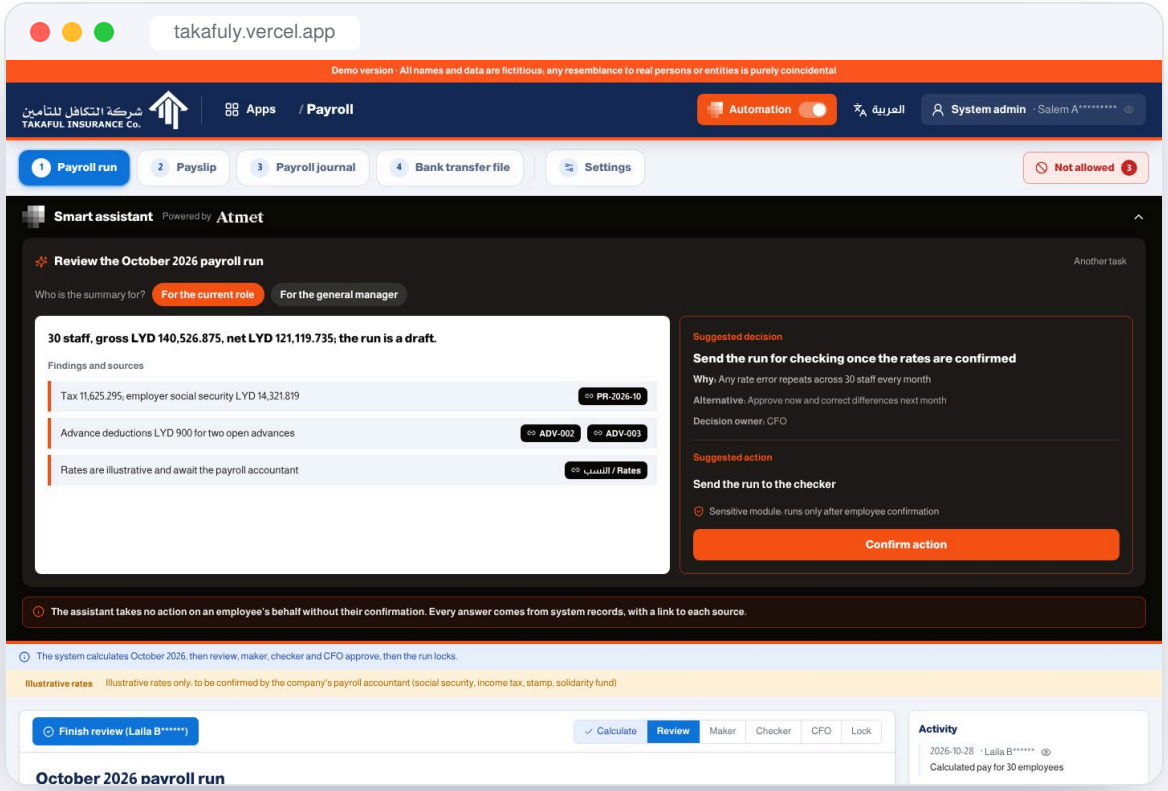

Monthly run with maker-checker, posted to the shareholders' fund only

Powered by Atmet

Before automation

After automation

Protecting the sensitive modules

The database itself refuses the mistake, not only the screen.

Customer management

The system blocks saving on a matching national number and shows the existing record

Claims

Strict state machine: the API and the database refuse any skip across the six stages

Contributions & billing

The system splits every receipt automatically by the certificate's approved split rule

Accounting & Finance

The database requires one fund per journal line and an account from that same fund

Sharia Compliance

Sharia status is mandatory on every contract and transaction; never

Surplus & Distribution

A fixed formula shown line by line, no manual figures

Investment Funds

Every contract and counterparty needs an SSB resolution before booking

Payroll

Whoever prepares the run cannot approve it: checker, then CFO

Hosting on company servers or in the cloud

One Docker package

Application

Background worker

Database

PostgreSQL

Company on-site servers

or the cloud

AWS

Azure

Three independent environments

Development

Test

Production

Daily backups

Data migration from Oracle

Delivery in 6 months

3 months of building, 1 month of testing and parallel run, 2 months of supervised live operation.

Build | **Testing & parallel run** | **Supervised operation**

Month 1

Foundation & front office

- Customer management
- Underwriting & risk
- Policy issue & renewal
- Contributions & billing

Users, access, dictionary, products

Month 2

Accounting & claims

- Accounting & Finance
- Claims
- Retakaful
- Agents & brokers

Fund separation in the database

Month 3

Sharia, investments & staff

- Sharia Compliance
- Investment Funds
- Surplus & Distribution
- Dashboards & reports
- Human Resources
- Payroll

Security & penetration test

Month 4

Testing & comparison

- Data migration from Oracle
- Bank and SMS integration
- Both systems live, figures compared daily
- Training and UAT

Months 5–6

Going live

- Old system switched off
- Daily monitoring and reconciliation
- Issues fixed within 24 hours
- Two full month-ends, then handover

6-month warranty after handover

Key information before building

All other decisions are default settings, changeable later.

1. **Current system**
2. **Servers**
3. **Data to move**
4. **Wakala & Mudaraba**
5. **Chart of accounts**
6. **Products & tariffs**
7. **Branches & border points**
8. **Banks & payments**
9. **Retakaful**
10. **Sharia board**
11. **Staff & departments**
12. **Payroll**

Next steps

1

Demo walkthrough with any role

2

Key questions answered and modules ranked

3

Terminology review in the dictionary

4

Build starts once the information is complete
